

BAY WATER POLLUTION CONTROL

The City Council is unalterably opposed to the discharge of any raw sewage, sewage effluent, litter, debris or other wastes into Newport Bay that in any possible way could cause pollution and contamination of the waters of Newport Bay.

The Council will utilize information available from other regulatory agencies, such as the Regional Water Quality Control Board, the Orange County Health Care Agency, the U.S. Army Corps of Engineers, and the State Boating and Waterways Division to further improve Bay water quality and meet or exceed California Water-Contact Sports Standards.

The Council further urges the County of Orange and any other public and private agencies to take all practical steps to reduce or eliminate sediment flows into Upper Newport Bay during rainy seasons.
