

8.1 Landscape Zones

The Project is divided into seven (7) landscape zones, identified on Exhibit II.8-1, consistent with the fire safety requirements set forth in Chapter 3, Land Uses and Development Standards, of the NBR PC Development Plan and the Fire and Life Safety Program, provided in the Technical Appendices of this Master Site Plan.

8.1.1 Zone A

Generally, Zone A is a 20-foot minimum within residential rear yards; a flat or level grade defensible space area consisting of irrigated landscape. Zone A will be located on private lots generally within the rear yards of the lots, and may in certain situations reduce to a 10-foot minimum in a side yard situation. Zone A is a 10-foot minimum at the Resort Inn overlooking West Coast Highway where fire behavior models show a significantly reduced risk.

Combustible structures will be prohibited within Zone A. Existing vegetation within the zone will be removed and replaced with plants listed in the Permitted Plant Palette for Zone A as shown in Section 8.5, Plant Palettes. Plants determined by the Fire Department to be highly combustible will be removed during regular maintenance.

There are no potentially sensitive habitats within or adjacent to Zone A, and thinning of landscape will be permitted throughout the year.

8.1.2 Zone B

Zone B will vary in width from a minimum of 50 feet up to approximately 126 feet from Zone A towards native vegetation areas and consist of a low fuel landscape within an irrigation system designed to mimic normal/average rainfall and to provide the necessary fuel moisture to the plants during dry periods or seasons.

All of Zone B will be maintained by a Homeowners Association (HOA) or similar community entity. Existing vegetation within Zone B will be removed and replanted with the permitted low-fuel-volume plants listed on the permitted plant palette for Zone B as shown in Section 8.5. Plants determined by the Fire Department to be highly combustible will be removed during regular maintenance.

There are no potentially sensitive habitats within Zone B and thinning and/or removal of non-approved landscape will be permitted throughout the year. As in Zone A, combustible structures and construction are not allowed within Zone B.

8.1.3 Zone C

Zone C adjoins Zone B or Zone 2 and is a 50-foot minimum in most areas connecting Zone B or Zone 2 to existing potential special-status habitats. Zone C also serves as native habitat restoration as proposed in the Habitat Restoration Plan (HRP). Zone C will be maintained either by an HOA and/or a conservancy group yet to be determined.

Zone C will be composed of native grassland and/or cactus areas consisting of non-irrigated native plant species that contain low fuel loads as described in the plant palette in Section 8.5. All existing non-native plants and species not approved by the HRP for this area will be removed. Zone C will not include the pruning, thinning, or removing of approved native vegetation.

Maintenance within Zone C will include removal of non-native/invasive species and dead plant material. Combustible structures and construction are not allowed within Zone C.

8.1.4 Zone 1

Zone 1 is a 20-foot minimum flat or level grade defensible space area consisting of hardscape and/or irrigated landscape. Zone 1 will generally be limited to public streets, private rear yards, and some private front yard lots. The maintenance responsibility shall be with the property owner for all portions of Zone 1 located within an owner's lot. Any portion of Zone 1 outside a property owner's lot shall be maintained by an HOA or similar entity.

Existing vegetation within Zone 1 will be removed and replaced with plants listed in the Permitted Plant Palette for Zone 1 as shown in Section 8.5. Plants determined by the Newport Beach Fire Department to be highly combustible will be removed during regular maintenance.

There are no potentially sensitive habitats within or adjacent to Zone 2, and thinning of landscape will be permitted throughout the year. Combustible structures and construction are prohibited within Zone 1.

8.1.5 Zone 2

Zone 2 will vary in width from essentially 0 feet up to approximately 230 feet from Zone 1. Zone 2 will consist of community landscape plant material with a full irrigation system.

All of Zone 2 will be maintained by an HOA or similar entity. Existing vegetation within Zone 2 will be removed and replanted with the permitted plant palette specific for Zone 2 as shown in Section 8.5. Plants determined by the Newport Beach Fire Department to be highly combustible will be removed during regular maintenance.

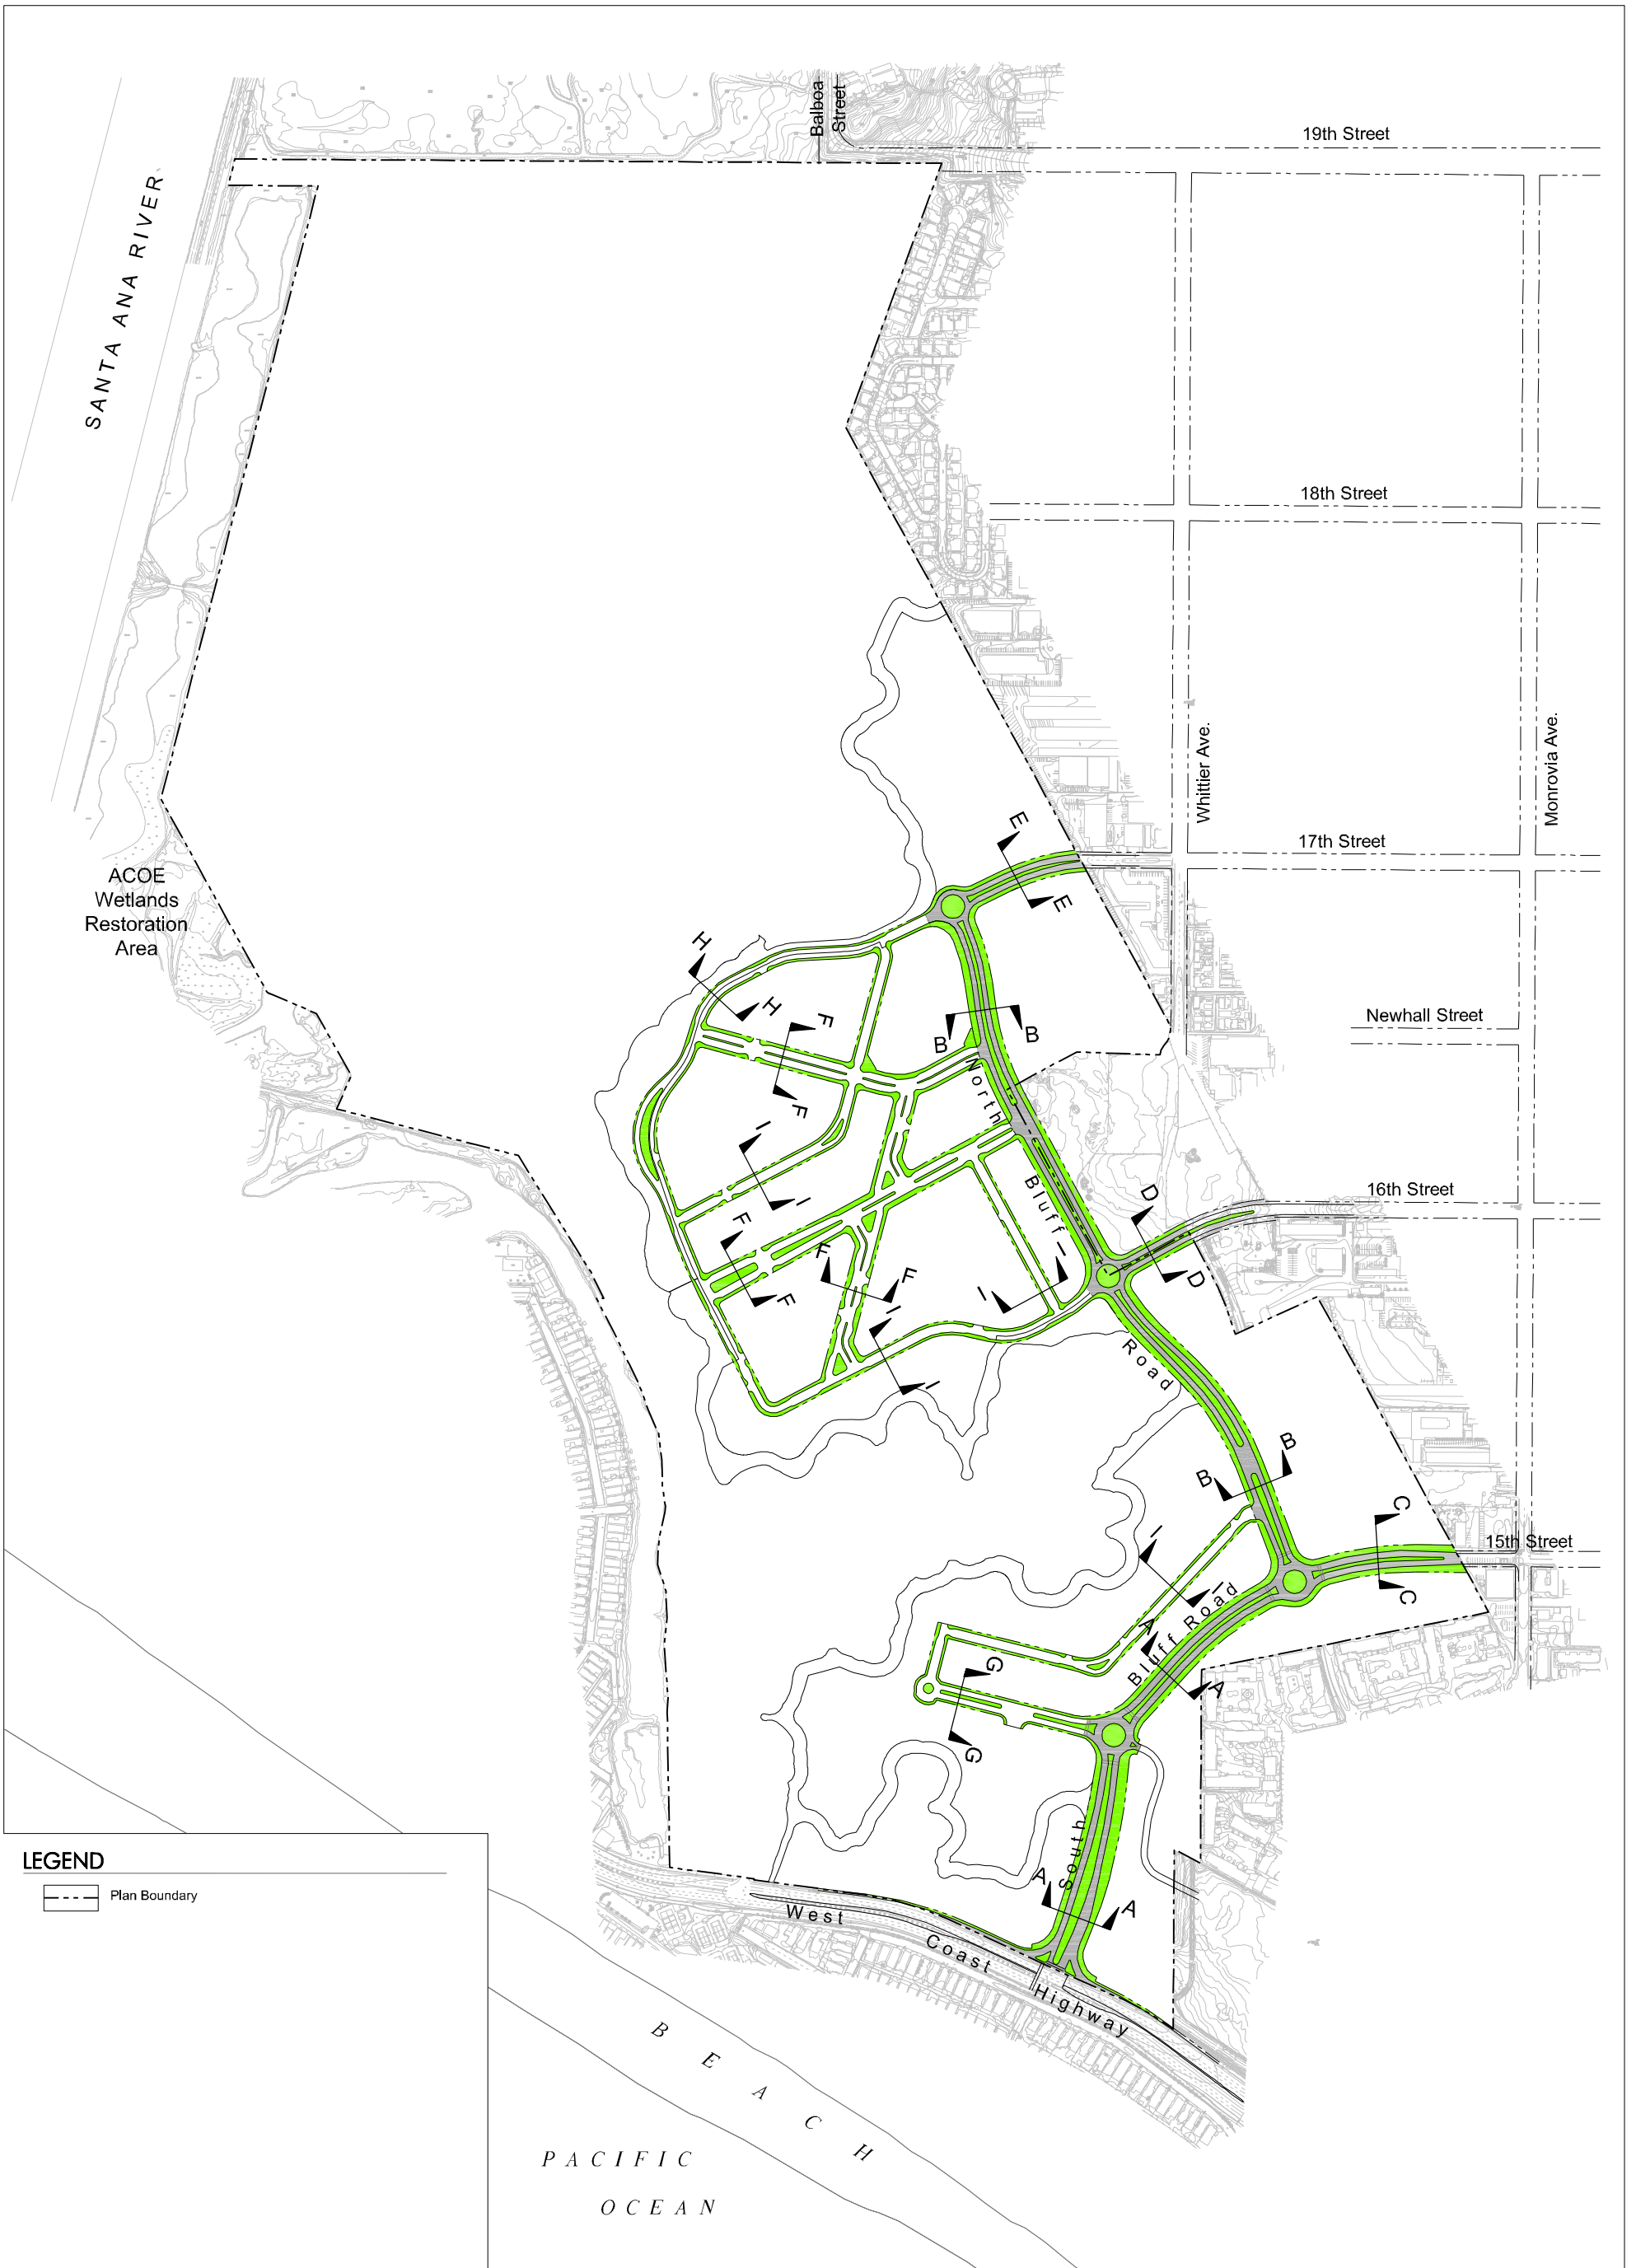

There are no sensitive habitats within or adjacent to Zone 2, and thinning of landscape will be permitted throughout the year. Combustible structures and construction are not allowed in Zone 2.

8.2 Streetscape Cross-Sections

8.2.1 Streetscape Design

The major backbone road for the community is Bluff Road (North and South) which provides the major entries to the Site. Planting materials for the Bluff Road entries are based on appropriate scale to the street space, low maintenance, and water usage. Refer to Exhibits II.8-3 through II.8-13 for the overall community streetscape designs.

Landscape design for the collector and local streets is intended to create an aesthetically cohesive streetscape at a pedestrian scale throughout the community. Continuity plays an important role in the neighborhood design and is expressed through thoughtful selections of the landscape plant materials. The streetscape design and overall landscape concept is consistent with the vision and guidelines set forth in Appendix A, Design Guidelines, of the PC Development Plan.

8.3 Master Street Lighting Standards and Requirements

The Master Street Lighting has been designed to a pedestrian scale and in conformance with the dark-sky lighting concepts set forth in Section 5.10, Lighting Guidelines, of the NBR PC Development Plan Design Guidelines (Appendix A) and with the provisions of applicable Building Codes. Lighting will be cohesive in its design and contribute to the aesthetic and environmentally-conscious character of the community's green streets. Exhibit II.8-14 illustrates the proposed street lighting standards.

8.4 Plant Palette

The Plant Palette provided in this Master Site Plan is consistent with the Landscape Plant Palette provided in Appendix A, Design Guidelines, of the NBR Planned Community Development Plan.
