Glossary of Terms and Qualifiers

Work Order: 18-01-0948

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

6	Glossary of Terms and Qualifiers.	48
7	Chain-of-Custody/Sample Receipt Form.	49

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 01/16/18. They were assigned to Work Order 18-01-1094.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 18-01-1094

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

5	Sample Analysis Summary.	40
6	Glossary of Terms and Qualifiers.	41
7	Chain-of-Custody/Sample Receipt Form.	42

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 01/17/18. They were assigned to Work Order 18-01-1208.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

EPA 6020 Metals: Chromium was determined to be above the reporting limit in the Method Blank though the reported concentration is 10x greater in the associated sample. No further action is required.

EPA 8270D (M) TQ/EI Pyrethroids: The LCS/LCSD RPD was outside of established control limits for Allethrin and Resmethrin/Bioresmethrin. The individual % recoveries were within accepted limits, the results have been flagged with the appropriate qualifier and are released with no further action.

Glossary of Terms and Qualifiers

Work Order: 18-01-1208

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

5	Sample Analysis Summary.	61
6	Glossary of Terms and Qualifiers.	62
7	Chain-of-Custody/Sample Receipt Form.	63

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 01/19/18. They were assigned to Work Order 18-01-1437.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

 - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

Parameter	Result	RL	MDL	DF	Qualifiers
Dibutyltin	22	5.3	1.3	1.00	
Monobutyltin	ND	5.3	2.4	1.00	
Tetrabutyltin	ND	5.3	1.3	1.00	
Tributyltin	ND	5.3	2.6	1.00	
Surrogate	Rec. (%)	Control Limits	Qualifiers		
Tripentyltin	93	27-135			

RL: Reporting Limit. DF: Dilution Factor. MDL: Method Detection Limit.

Analytical Report

ANCHOR QEA, LLC
 27201 Puerta Real, Suite 350
 Mission Viejo, CA 92691-8306

Date Received: 01/19/18
 Work Order: 18-01-1437
 Preparation: EPA 3550B (M)
 Method: Organotins by Krone et al.
 Units: ug/kg

Project: City of Newport Beach - Federal Channels

Page 2 of 2

Glossary of Terms and Qualifiers

Work Order: 18-01-1437

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

SAMPLE ANOMALY REPORT

DATE: 01/19/2018

SAMPLES, CONTAINERS, AND LABELS:

- Sample(s) NOT RECEIVED but listed on COC
- Sample(s) received but NOT LISTED on COC
- Holding time expired (list client or ECI sample ID and analysis)
- Insufficient sample amount for requested analysis (list analysis)
- Improper container(s) used (list analysis)
- Improper preservative used (list analysis)
- pH outside acceptable range (list analysis)
- No preservative noted on COC or label (list analysis and notify lab)
- Sample container(s) not labeled
- Client sample label(s) illegible (list container type and analysis)
- Client sample label(s) do not match COC (comment)
 - Project information
 - Client sample ID
 - Sampling date and/or time
 - Number of container(s)
 - Requested analysis
- Sample container(s) compromised (comment)
 - Broken
 - Water present in sample container
- Air sample container(s) compromised (comment)
 - Flat
 - Very low in volume
 - Leaking (not transferred; duplicate bag submitted)
 - Leaking (transferred into ECI Tedlar™ bags*)
 - Leaking (transferred into client's Tedlar™ bags*)

* Transferred at client's request.

Eurofins Calscience (Calscience) certifies that the test results provided in this report meet all NELAC Institute requirements for parameters for which accreditation is required or available. Any exceptions to NELAC Institute requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

5	Sample Analysis Summary.	77
6	Glossary of Terms and Qualifiers.	78
7	Chain-of-Custody/Sample Receipt Form.	79

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 03/05/18. They were assigned to Work Order 18-03-0357.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

DoD Projects:

The test results contained in this report are accredited under the laboratory's ISO/IEC 17025:2005 and DoD-ELAP accreditation issued by the ANSI-ASQ National Accreditation Board. Refer to certificate and scope of accreditation ADE-1864.

EPA 8081A: The LCS recoveries for 4,4'-DDT were above control limits criteria though within Marginal Exceedance limits; the associated sample data may be bias high for this analyte.

Comment(s):
 - Results are reported on a dry weight basis.
 - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

Comment(s): - Results are reported on a dry weight basis.
 - Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

Parameter	Result	RL	MDL	DF	Qualifiers
4,4'-DDD	17	21	11	10.0	J
4,4'-DDE	100	21	9.4	10.0	

Surrogate	Rec. (%)	Control Limits	Qualifiers
2,4,5,6-Tetrachloro-m-Xylene	74	25-145	
Decachlorobiphenyl	93	24-168	

RL: Reporting Limit. DF: Dilution Factor. MDL: Method Detection Limit.

Comment(s): - Results are reported on a dry weight basis.

- Results were evaluated to the MDL (DL), concentrations \geq to the MDL (DL) but $<$ RL (LOQ), if found, are qualified with a "J" flag.

Glossary of Terms and Qualifiers

Work Order: 18-03-0357

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

SAMPLE ANOMALY REPORT

DATE: 03/06/2018

SAMPLES, CONTAINERS, AND LABELS:

- Sample(s) NOT RECEIVED but listed on COC
- Sample(s) received but NOT LISTED on COC
- Holding time expired (list client or ECI sample ID and analysis)
- Insufficient sample amount for requested analysis (list analysis)
- Improper container(s) used (list analysis)
- Improper preservative used (list analysis)
- pH outside acceptable range (list analysis)
- No preservative noted on COC or label (list analysis and notify lab)
- Sample container(s) not labeled
- Client sample label(s) illegible (list container type and analysis)
- Client sample label(s) do not match COC (comment)
 - Project information
 - Client sample ID
 - Sampling date and/or time
 - Number of container(s)
 - Requested analysis
- Sample container(s) compromised (comment)
 - Broken
 - Water present in sample container
- Air sample container(s) compromised (comment)
 - Flat
 - Very low in volume
 - Leaking (not transferred; duplicate bag submitted)
 - Leaking (transferred into ECI Tedlar™ bags*)
 - Leaking (transferred into client's Tedlar™ bags*)

* Transferred at client's request.

PN 170243-02.01
Newport Beach, California**

In compliance with the request by your authorized representative, Smith-Emery Laboratories has completed testing four (4) sediment samples in accordance with ASTM D422 standard test method for sieve analysis. Particles size between ½” to No.18 sieves are shell fragments and traces of shell fragments up to sieve No.45.

Attached summary sheet on plate A and particle size distribution graph on plate B.
Test results are as follows:

Attention: Chris Osuch

**RE: Newport Beach RGP 54
PN 170243-01.01
Newport Beach, California**

In compliance with the request by your authorized representative, Smith-Emery Laboratories has completed testing sixteen (16) sediment samples in accordance with ASTM D422 standard test method sieve analysis. Particles size between 3/8" to No.10 sieves are shell fragments and traces of shell fragments up to sieve No.45.

Attached summary sheet on plate A and particle size distribution graph on plate B to E.
Test results are as follows:

REPORT OF TEST

Date Sample Received: 2/6/18

Date Tested: 2/9-14/15

Newport Beach, California**

In compliance with the request by your authorized representative, Smith-Emery Laboratories has completed testing sixteen (20) sediment samples in accordance with ASTM D422 standard test method sieve analysis. Particles size between 3/8" to No.10 sieves are shell fragments and traces of shell fragments up to sieve No.25.

Attached summary sheet on plate A and particle size distribution graph on plate B to E.
Test results are as follows:

Eurofins Calscience (Calscience) certifies that the test results provided in this report meet all NELAC Institute requirements for parameters for which accreditation is required or available. Any exceptions to NELAC Institute requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

	4.1 MS/MSD.	343
	4.2 Sample Duplicate.	363
	4.3 LCS/LCSD.	369
5	Sample Analysis Summary.	389
6	Glossary of Terms and Qualifiers.	390
7	Chain-of-Custody/Sample Receipt Form.	391

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 02/23/18. They were assigned to Work Order 18-02-1671.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of ≤ 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

DoD Projects:

The test results contained in this report are accredited under the laboratory's ISO/IEC 17025:2005 and DoD-ELAP accreditation issued by the ANSI-ASQ National Accreditation Board. Refer to certificate and scope of accreditation ADE-1864.

Glossary of Terms and Qualifiers

Work Order: 18-02-1671

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Hi Linda,
 You can use the time on the sample label.
 Thanks!
 Cindy

Hi Linda and Richard,
 Please find the analytical request for the Lower Newport Bay tissues, attached. Please let me know if you have any questions. As with the RGP 54 tissues, please only report DDTs from 8081 and dibutyltin from Krone.

Thanks!

INTRODUCTION

Anchor QEA (Anchor) partnered with Nautilus Environmental (Nautilus) to perform toxicity testing on sediment samples for the Lower Newport Bay Federal Channels maintenance dredging project Newport Beach, CA. Eleven site sediment samples, a reference sediment sample, and site water used for elutriate preparation were evaluated in accordance with test methods found in "Evaluation of Dredged Material Proposed for Ocean Disposal" (OTM; USEPA/USACE 1991), "Evaluation of Dredged Material Proposed for Discharge in Waters of the U.S." (ITM; USEPA/USACE 1998), as well as guidance cited in the reference section of this report.

Nautilus conducted solid phase (SP), suspended particulate phase (SPP), and bioaccumulation potential (BP) sediment evaluations in January and February 2018 as a part of the testing program described in the biological testing section of the Sampling Analysis Plan (SAP) provided by Anchor (Anchor 2017). This report summarizes testing results for samples collected between January 6 and 19, 2018 as well as samples subsequently composited on January 19 and 22, 2018. Test exposures were initiated between January 24 and February 22, 2018.

MATERIALS AND METHODS

Sample materials were delivered by courier to the Nautilus laboratory in San Diego, California. Upon arrival, temperatures were recorded and samples were sealed with no headspace and stored in the dark at 4°C until either composited or used for testing. Anchor requested that samples from the top and middle of sites BIMW and BIME be composited into a single sample from each area. Nautilus performed this task in the Nautilus facility by combining all volume of individual sites together and mixing via a stainless steel mixing blade affixed to a hand drill to create a single composite sample. Each sample to be tested was thoroughly homogenized and interstitial pore water was collected for measurement of total ammonia. A summary of sample identification, collection and receipt dates and times, test types performed, and compositing information is provided in Table 1. Test methods and acceptability criteria are summarized in Tables 2 through 4. Chain of Custody documentation and sample receipt information are included in Appendices A and B, respectively.

SPP - Suspended Particulate Phase

^a Samples created by Nautilus staff at Nautilus by compositing individual samples together. Collection date is the date the composite samples were created

Table 2. 10-day Survival Solid-Phase (SP) Toxicity Test Specifications

Method-Specific Conditions: Marine amphipod (<i>Ampelisca abdita</i>)	
Source & Origin	Aquatic Research Organisms; field collected near Hampton, NH
Size	3–5 millimeter (mm)
Chambers	1-Liter (L) glass jar, 4-centimeter (cm) sediment with 800-milliliter (mL) overlying water
Negative Control	Marine sediment from Aquatic BioSystems, Inc.
Reference Toxicant	Cadmium chloride and Ammonium chloride
Method-Specific Conditions: Marine polychaete (<i>Neanthes arenaceodentata</i>)	
Source & Origin	Aquatic Toxicology Support; laboratory cultured in Bremerton, WA
Age	2–3 weeks, post emergence
Chambers	1-L glass jar, 2.5-cm sediment with 800-mL overlying water
Negative Control	Clean, rinsed beach sand collected near Scripps Institution of Oceanography (SIO) Pier in La Jolla, CA
Reference Toxicant	Cadmium chloride
Shared SP Conditions:	
Overlying Water	Natural seawater collected offshore of SIO Pier in La Jolla, CA. Seawater is 20-micrometer (μm) filtered and diluted to 30 parts per thousand (ppt) with deionized water prior to testing
Sample Preparation	Sediments sieved through 500- μm Nitex [®] mesh
Acceptability Criterion	≥ 90 percent mean lab control survival

Table 3. Suspended Particulate-Phase (SPP) Toxicity Test Specifications

Method-Specific Conditions: Mediterranean mussel (<i>Mytilus galloprovincialis</i>)	
Duration & Endpoints	48 hours, normal shell development and survival
Source & Origin	Field collected in San Diego, CA
Age	<4 hr old larvae
Concentrations	100, 50, 10, and 1% elutriate, plus lab control and site water control
Acceptability Criteria	≥70 percent mean normal shell development and survival in lab control
Reference Toxicant	Ammonium chloride
Method-Specific Conditions: Mysid shrimp (<i>Americamysis bahia</i>) & Inland Silverside (<i>Menidia beryllina</i>)	
Duration & Endpoint	96 hours, Survival
Source & Origin	Aquatic BioSystems Inc.; laboratory cultured in Fort Collins, CO
Age	4-5 days, (Mysid); 10-13 days, (Silverside)
Concentrations	100, 50, and 10% elutriate, plus lab control and site water control
Acceptability Criterion	≥90 percent mean lab control survival
Reference Toxicant	Copper chloride
Shared SPP Conditions:	
Dilution & Control Water	Natural seawater collected offshore of SIO Pier, La Jolla, CA. Seawater is 20-µm filtered and was diluted to 32 ppt with deionized water prior to testing
Test Solution Preparation	Standard elutriate test (SET) method Elutriate prepared with site water

Table 4. 28-day Bioaccumulation Potential (BP) Exposure Specifications

Test Species	Bent-nose clam (<i>Macoma nasuta</i>) & Polychaete worm (<i>Nereis virens</i>)
Source & Origin	J & G Gunstone Clams, Inc.; field collected near Port Townsend, WA (Clam) Aquatic Research Organisms; field collected near Hampton, NH (Worm)
Size	Adult
Test chambers	10-gallon glass aquaria, 5-6 cm sediment and 26-L overlying water
Overlying water	Natural seawater collected offshore of SIO Pier, La Jolla, CA. Seawater is 20- μ m filtered and continuously chilled; test conducted on constant flow through
Negative Control	Sediment from clam habitat
Reference toxicant	None

The approach to data analysis was to first conduct an evaluation of normality and assess homogeneity of variance. Proportion data were subjected to arcsine square-root transformations for survival comparisons using an ad hoc test for significance as indicated by ANOVA results. Statistical analyses of SP test data were performed using GraphPad Prism, Version 6.05. For SP tests, sample results were compared to reference sample results. Statistical analysis for all other test data was performed using Comprehensive Environmental Toxicity Information System Software (CETIS™), Version 1.8.7.20. (Tidepool Scientific Software 2001-2013). Analyses followed standard USEPA flow chart methods specified by test type. For SPP tests, elutriate concentrations were compared to the lab control unless otherwise indicated.

RESULTS

Detailed results for all tests are provided in Appendix C. Raw datasheets including water quality data, ammonia analyses, and summaries of statistical analyses are included in Appendix D.

Mean survival in the laboratory controls met the acceptability criterion for both SP test species. Mean survival in the reference sample was 94 percent or greater for both species. There was not a statistically significant effect observed in any of the samples for either the *Ampelisca* or *Neanthes* test compared to the reference sample (Appendix D). A brief summary of amphipod and polychaete toxicity test results is shown in Table 5. A detailed summary of results for both species can be found in Appendix C.

Table 5. Summary of Marine Amphipod SP Results

Sample ID	<i>Ampelisca</i> Mean % Survival	<i>Neanthes</i> Mean % Survival	Significant Compared to Reference	Significant and Above Effect Threshold? ^a
Lab Control #1	98	100	NA	NA
LA3-REF-010618	94	100	No	No
TB-COMP-011218	99	100	No	No
MCN1-COMP-T-011518	98	100	No	No
MCN2-COMP-T-011618	98	100	No	No
MCN3-COMP-011918	99	100	No	No
MCN4-COMP-011918	92	100	No	No
Lab Control #2	97	100	NA	NA
MCN5-COMP-011818	95	100	No	No
EC-COMP-011718	95	92	No	No
BIME-COMP-T-M-012218	94	100	No	No
BIMW-COMP-T-M-011918	98	100	No	No
BIN-COMP-T-011718	95	96	No	No
BIS-COMP-011218	83	100	No	No

NA = not applicable

^a Percent effect threshold: *Ampelisca* ≥20% reduction from reference per the OTM (USEPA/USACE 1991); *Neanthes* ≥10% reduction from reference per the OTM (USEPA/USACE 1991)

For all SPP testing, the controls met or exceeded the test acceptability criterion. There were no statistically significant effects to either *Americamysis* or *Menida* in any elutriate concentration when compared to their respective lab control. For *Mytilus*, samples BIMW-COMP-T-M, BIS-COMP, BIN-COMP-T, and MCN3-COMP were statistically reduced with regard to development rate and survival in the undiluted elutriate sample, when compared to the lab control. For *Mytilus*, samples BIME-COMP-T-M and MCN4-COMP

were statistically reduced, with regard to development rate in the undiluted elutriate sample, when compared to the lab control. For *Mytilus*, sample EC-COMP was statistically reduced, with regard to survival in the undiluted elutriate sample, when compared to the lab control. (see Table 6).

Table 6. Summary of Results for Samples with a Statistically Significant SPP Response

Sample ID	Species	Endpoint	Mean Result in Undiluted Elutriate	EC ₅₀
BIMW-COMP-T-M-011918	<i>Mytilus</i>	Development rate	3.4% normally developed	75.9
		Survival	86.6% survival	>100
BIME-COMP-T-M-012218	<i>Mytilus</i>	Development rate	1.0% normally developed	74.4
BIS-COMP-011218	<i>Mytilus</i>	Development rate	0.0% normally developed	75.0
		Survival	76.5% survival	>100
BIN-COMP-T-011718	<i>Mytilus</i>	Development rate	52.7% normally developed	>100
		Survival	81.2% survival	>100
EC-COMP-011718	<i>Mytilus</i>	Survival	83.2% survival	>100
MCN3-COMP-011918	<i>Mytilus</i>	Development rate	3.9% normally developed	73.4
		Survival	77.6% survival	>100
MCN4-COMP-011918	<i>Mytilus</i>	Development rate	12.4% normally developed	77.2

EC₅₀: concentration expected to cause an adverse or lethal effect to 50 percent of the organisms

For the BP exposures, survival ranged from 90 to 100 percent for both species in all samples, which should provide sufficient tissue volume for analysis. Tissue samples were frozen and sent to Eurofins Calscience, Inc. in Garden Grove, CA to hold frozen until a request for analysis was made. Each replicate was sent as a separate sample. Three zero time replicates per species were also sent.

QUALITY ASSURANCE

All of the data presented have been thoroughly reviewed and deemed acceptable for reporting in accordance with our internal Quality Assurance and Quality Control (QA/QC) program and applicable protocols. All testing was initiated within six weeks of site sample collection, and met the holding time requirements. Noteworthy deviations with respect to test conditions or acceptability criteria are reported below. Minor deviations are noted on datasheets with corrective actions taken when appropriate. All were determined to be minor with no likely impact on the final data or its interpretation. Copies of reference toxicant results and a list of qualifier codes can be found in Appendices E and F, respectively.

Solid-Phase Toxicity Tests

All controls met the test acceptability criterion for both species. All water quality values were within the required ranges as defined by the test protocols for both species. Additionally, reference site results met all control acceptability criteria.

Suspended Particulate-Phase Toxicity Tests

All controls met the test acceptability criteria for all SPP exposures. All protocol method conditions were met. All water quality values were within the required ranges as defined by the test protocols for all other SPP exposures.

Bioaccumulation Potential Tests

Mean clam and worm survival in each replicate was sufficient to achieve minimum tissue requirements for chemical analysis. The test-wide mean temperature did not deviate by more than 1°C over the course of the exposure and instantaneous temperature remained within $\pm 3^\circ\text{C}$. Water quality parameters satisfied test protocol requirements and data are valid without qualification.

Reference Toxicant Tests

Solid Phase Reference Toxicant Tests

For the polychaete species, the median lethal effect concentration (LC₅₀) in the concurrent reference toxicant test using cadmium chloride was within two standard deviations of the internal control chart mean. The test control met acceptability criteria.

For the amphipod species, the LC₅₀ value for concurrent reference toxicant tests using cadmium chloride was within two standard deviations of the internal control charts means. However, the test lab control (65 percent mean survival) did not meet the acceptability criterion for survival of 90 percent. The test was re-run on February 2, 2018 using the same batch of organisms. The LC₅₀ value for this test was also within two standard deviations of the internal control charts means. However, the test control (88 percent mean survival) did not meet the acceptability criterion for survival.

An additional concurrent reference toxicant test with *Ampelisca* using ammonium chloride as the toxicant was performed to add additional information with regard to potential effects from ammonia. The test control (80 percent mean survival) did not meet the acceptability criterion for survival. The no observed effect concentration (NOEC) for the test was 59 milligrams per Liter (mg/L) total ammonia and the LC₅₀ was 98 mg/L total ammonia. This test was also re-run on February 2, 2018 using the same batch of organisms. The test control (78 percent mean survival) did not meet the acceptability criterion for survival. The NOEC for the test was 62 milligrams per Liter (mg/L) total ammonia and the LC₅₀ was 85 mg/L total ammonia.

Despite controls not meeting acceptability criteria, the response to both toxicants in all of the tests were consistent with previous batches. In addition, mean survival in the lab controls and the reference sample met acceptability. After consultation with Anchor it was determined that any further retesting would likely not benefit the evaluation moving forward.

Suspended Particulate Reference Toxicant Tests

The median effect concentration (EC₅₀) value for the ammonium chloride reference toxicant test associated with *Mytilus* was within two standard deviations of the internal control chart mean for development rate for all three testing batches. For the test performed February 14, 2018, the NOEC for the development endpoint of this test was 4.0 mg/L total ammonia and the EC₅₀ was 6.9 mg/L total ammonia. For the test performed February 20, 2018, the NOEC for the development endpoint of this test was 8.7 mg/L total ammonia and the EC₅₀ was 12.6 mg/L total ammonia. For the test performed February 22, 2018, the NOEC for the development endpoint of this test was 3.5 mg/L total ammonia and the EC₅₀ was 5.6 mg/L total ammonia.

LC₅₀ values for *Menidia* copper reference toxicant tests were within two standard deviations of the internal control charts means for both species tested for all three

testing batches with the exception of one. The test conducted on February 22, 2018 was above two standard deviations on the control chart mean. This may indicate that this batch of organisms was less sensitive to copper compared to previous batches.

The LC₅₀ value for *Americamysis* copper reference toxicant test conducted February 14, 2018 was within two standard deviations of the internal control chart mean. The LC₅₀ value for *Americamysis* copper reference toxicant test conducted February 21, 2018 was below two standard deviations of the internal control chart mean. This may indicate this batch of organisms was more sensitive to copper compared to previous batches.

All reference toxicant test controls met acceptability criteria.

Potential Confounding Factor: Ammonia

Total ammonia values in the interstitial water of the test sediments prior to testing ranged from 11.3 to 27.8 mg/L. Due to measured ammonia levels slightly below the threshold of 30 mg/L reported for *Ampelisca* (USEPA 1994), samples BIS-COMP, BIN-COMP-T, BMW-COMP-T-M, and BIME-COMP-T-M were purged prior to introduction of organisms. The target interstitial ammonia level prior to the addition of test organisms for *Ampelisca*, as directed by Anchor, was 20 mg/L or below. Test replicates and surrogates were set up with test sediments and clean overlying water on January 25, 2018 and allowed to purge until test initiation on January 30, 2018. Ammonia purging was conducted by aerating the test chambers and renewing the overlying water two times daily prior to test initiation. Total ammonia levels were reduced to concentrations below 20 mg/L prior to initiation in all samples that went through the purging process. The Day 0 porewater total ammonia values for the acclimated samples ranged from 14.0 to 19.2 mg/L. No significant effects were observed in the test for these samples (Dillon et al. 1993, USEPA 1994, Kohn et al. 1994).

Significant effects were observed in the SPP *Mytilus* testing for both the development rate and survival endpoints, however for the discussion purposes here only effects to the development endpoint will be discussed in more detail. There was only one instance (sample EC-COMP) where a significant effect was observed only in the survival endpoint. In this instance survival was 83.3 percent and the EC₅₀ was >100 percent. In all other instances there was either only an effect in development rate or there was an effect in both development rate and survival.

The development endpoint for samples BMW-COMP-T-M, BIME-COMP-T-M, and BIS-COMP all exhibited a NOEC of 50 percent. The total ammonia concentrations (7.4, 8.3, and 10.5 mg/L, respectively) in the undiluted elutriate sample on Day 0 of the test exceeded the calculated NOEC value (4.0 mg/L) for development in the associated ammonia reference toxicant test. This suggests developmental effects may be, at least in part, due to ammonia.

The development endpoint for sample BIN-COMP-T exhibited a NOEC of 50 percent. The total ammonia concentration (8.7 mg/L) in the undiluted elutriate sample on Day 0

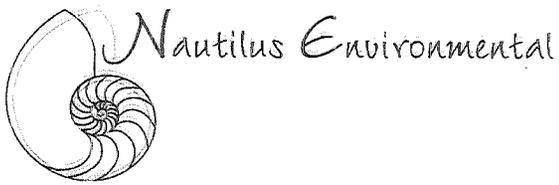

of the test was the same as the calculated NOEC value (8.7 mg/L) for development in the associated ammonia reference toxicant test. Because the development rate in the undiluted sample was 53 percent, it suggests developmental effects were unlikely due entirely to ammonia.

The development endpoint for samples MCN3-COMP and MCN4-COMP both exhibited a NOEC of 10 percent. The total ammonia concentrations for both samples (6.2 and 3.8 mg/L) in the undiluted elutriate sample on Day 0 of the test exceeded the calculated NOEC value (3.5 mg/L) for development in the associated ammonia reference toxicant test. This suggests developmental effects may be, at least in part, due to ammonia (Tang et al. 1997).

Larval Development Worksheet

Client: Anchor O&A
 Test No.: 1802-S069 to S072
 Test Species: Mytilus galloprovincialis
 Animal Source: Mission Bay
 Date Received: 2/12/18
 Test Chambers: 30ml Shell Vials
 Sample Volume: 10 ml

Start Date/Time: 2/14/2018 1600
 End Date/Time: 2/16/2018 1500
 Technician Initials: YS

Spawn Information

First Gamete Release Time: 11:50

Sex	Number Spawning
Male	4+
Female	5+

Gamete Selection

Sex	Beaker Number(s)	Condition (sperm motility, egg density, color, shape, etc.)
Male	1, 2	excellent motility & density
Female 1	5	excellent density, whitish, mostly round
Female 2	2	excellent density, pale orange, mostly round
Female 3	3	excellent density, pale orange, mostly round

Egg Fertilization Time: 13:20

Embryo Stock Selection

Stock Number	% of embryos at 2-cell division stage
Female 1	100
Female 2	100
Female 3	100

Stock(s) chosen for testing: 3

Embryo Inoculum Preparation

Target count on Sedgwick-Rafter slide for desired density is 6 embryos

Number Counted: 9 8
8 6
8 8
5 9
5 5

Mean: 7.1

Mean 7.1 X 50 = 355 embryos/ml

Initial Density: 355 = 1.18 (dilution factor)
 Desired Final Density: 300
 (to inoculate with 0.5 ml)

Prepare the embryo inoculum according to the calculated dilution factor. For example, if the dilution factor is 2.25, use 100 ml of existing stock (1 part) and 125 ml of dilution water (1.25 parts).

 End Date/Time: 2/16/2018 1500
 Technician Initials: YS

Spawn Information

First Gamete Release Time: 11:50

Sex	Number Spawning
Male	4 +
Female	5 +

Gamete Selection

Sex	Beaker Number(s)	Condition (sperm motility, egg density, color, shape, etc.)
Male	1, 3	excellent motility & density
Female 1	5	excellent density, whitish, mostly round
Female 2	2	excellent density, pale orange, mostly round
Female 3	3	excellent density, pale orange, mostly round

Egg Fertilization Time: 13:20

Embryo Stock Selection

Stock Number	% of embryos at 2-cell division stage
Female 1	100
Female 2	100
Female 3	100

Stock(s) chosen for testing: 3

Embryo Inoculum Preparation

Target count on Sedgwick-Rafter slide for desired density is 6 embryos

Number Counted: 9 8
8 6
8 8
5 9
5 5

Mean: 7.1

Mean 7.1 X 50 = 355 embryos/ml

Initial Density: 355 = 1.18 (dilution factor)
 Desired Final Density: 300
 (to inoculate with 0.5 ml)

Prepare the embryo inoculum according to the calculated dilution factor. For example, if the dilution factor is 2.25, use 100 ml of existing stock (1 part) and 125 ml of dilution water (1.25 parts).

Spawn Information

First Gamete Release Time: 1237

Sex	Number Spawning
Male	8
Female	5

Gamete Selection

Sex	Beaker Number(s)	Condition (sperm motility, egg density, color, shape, etc.)
Male	1, 5, 7	Good Density + Motility
Female 1	1	mostly round, pale color, OK density
Female 2	2	Light orange color, OK shape, good density
Female 3	5	Light orange color, mostly round, good density

Egg Fertilization Time: 1352

Stock(s) chosen for testing: 1

Embryo Stock Selection

Stock Number	% of embryos at 2-cell division stage
Female 1	100
Female 2	-
Female 3	100

Embryo Inoculum Preparation

Target count on Sedgwick-Rafter slide for desired density is 6 embryos

Number Counted: 6 6
~~7~~ 9
12 8
~~7~~ 6
9 8

Mean: 7.8

Mean 7.8 × 50 = 390 embryos/ml

Initial Density: 390 = 1.3 (dilution factor)
 Desired Final Density: 300
 (to inoculate with 0.5 ml)

Prepare the embryo inoculum according to the calculated dilution factor. For example, if the dilution factor is 2.25, use 100 ml of existing stock (1 part) and 125 ml of dilution water (1.25 parts).

Spawn Information

First Gamete Release Time: 1237

Sex	Number Spawning
Male	8
Female	5

Gamete Selection

Sex	Beaker Number(s)	Condition (sperm motility, egg density, color, shape, etc.)
Male	1,5,7	Great Density + Motility
Female 1	1	mostly round, pale color, ok density
Female 2	2	light orange color, ok shape, good density
Female 3	5	light orange color, mostly round, great density

Egg Fertilization Time: 1352

Embryo Stock Selection

Stock Number	% of embryos at 2-cell division stage
Female 1	100
Female 2	-
Female 3	100

Stock(s) chosen for testing: 1

Embryo Inoculum Preparation

Target count on Sedgwick-Rafter slide for desired density is 6 embryos

Number Counted: 6 6
7 9
12 8
7 6
9 8

Mean: 7.8

Mean 7.8 X 50 = 390 embryos/ml

Initial Density: 390 = 1.3 (dilution factor)

Desired Final Density: 300
 (to inoculate with 0.5 ml)

Prepare the embryo inoculum according to the calculated dilution factor. For example, if the dilution factor is 2.25, use 100 ml of existing stock (1 part) and 125 ml of dilution water (1.25 parts).

 Technician Initials: EG

Spawn Information

First Gamete Release Time: 1240

Sex	Number Spawning
Male	5
Female	7 ⁺

Gamete Selection

Sex	Beaker Number(s)	Condition (sperm motility, egg density, color, shape, etc.)
Male	2, 3, 4, 5	Fair Density, OK motility
Female 1	1	pale orange color, mostly round, good density
Female 2	5	pale orange color, good density, OK shape
Female 3	6	pale orange color, good density, OK shape

Egg Fertilization Time: 1350

Embryo Stock Selection

Stock Number	% of embryos at 2-cell division stage
Female 1	100
Female 2	100
Female 3	100

Stock(s) chosen for testing: 1

Embryo Inoculum Preparation

Target count on Sedgwick-Rafter slide for desired density is 6 embryos

Number Counted:

<u>7</u>	<u>11</u>
<u>10</u>	<u>7</u>
<u>9</u>	<u>10</u>
<u>12</u>	<u>9</u>
<u>5</u>	<u>7</u>

Mean: 8.7

Mean 8.7 X 50 = 435 embryos/ml

Initial Density: 435 = 1.45 (dilution factor)

Desired Final Density: 300
 (to inoculate with 0.5 ml)

Prepare the embryo inoculum according to the calculated dilution factor. For example, if the dilution factor is 2.25, use 100 ml of existing stock (1 part) and 125 ml of dilution water (1.25 parts).

Ⓐ JC Q18 2/26/18

Marine Chronic Bioassay

Larval Development Worksheet

Client: Anchor QEA
 Test No.: 1802-5145
 Test Species: Mytilus galloprovincialis
 Animal Source: Mission Bay
 Date Received: 2/12/18
 Test Chambers: 30ml Shell Vials
 Sample Volume: 10 ml

Start Date/Time: 2/20/2018 1545
 End Date/Time: 2/22/2018 1415
 Technician Initials: EG

Spawn Information

First Gamete Release Time: 1240

Sex	Number Spawning
Male	5
Female	7

Gamete Selection

Sex	Beaker Number(s)	Condition (sperm motility, egg density, color, shape, etc.)
Male	2, 3, 4, 5	Fair Density, OK motility
Female 1	1	pale orange color, mostly round, good dens
Female 2	5	pale orange color, good density, OK shape
Female 3	6	pale orange color, good density, OK shape

Egg Fertilization Time: 1350

Embryo Stock Selection

Stock Number	% of embryos at 2-cell division stage
Female 1	100
Female 2	100
Female 3	100

Stock(s) chosen for testing: 1

Embryo Inoculum Preparation

Target count on Sedgwick-Rafter slide for desired density is 6 embryos

Number Counted:

<u>7</u>	<u>11</u>
<u>10</u>	<u>7</u>
<u>9</u>	<u>10</u>
<u>12</u>	<u>9</u>
<u>5</u>	<u>7</u>

Mean: 8.7

Mean 8.7 x 50 = 435 embryos/ml

Initial Density: 435 = 1.45 (dilution factor)
 Desired Final Density: 300
 (to inoculate with 0.5 ml)

Prepare the embryo inoculum according to the calculated dilution factor. For example, if the dilution factor is 2.25, use 100 ml of existing stock (1 part) and 125 ml of dilution water (1.25 parts).

Time Zero Control Counts

Rand. No.	No. Dividing	Total	% Dividing	Mean % Dividing

Graphics											
<p>The first plot shows the 96h Survival Rate on the y-axis (0.0 to 1.0) against C-% on the x-axis (0 LC, 10, 50, 100). It includes four box plots representing the distribution of survival rates at each concentration. The second plot shows the Centered Corr. Angle on the y-axis (-0.16 to 0.08) against Rankits on the x-axis (-2.0 to 2.0). It features a normal distribution curve and data points, with a vertical dashed line at Rankits = 0 and a horizontal dashed line at Centered Corr. Angle = 0.</p>

CETIS Analytical Report

Report Date: 06 Mar-18 16:10 (p 1 of 1)
 Test Code: 1802-S148 | 17-7666-7994

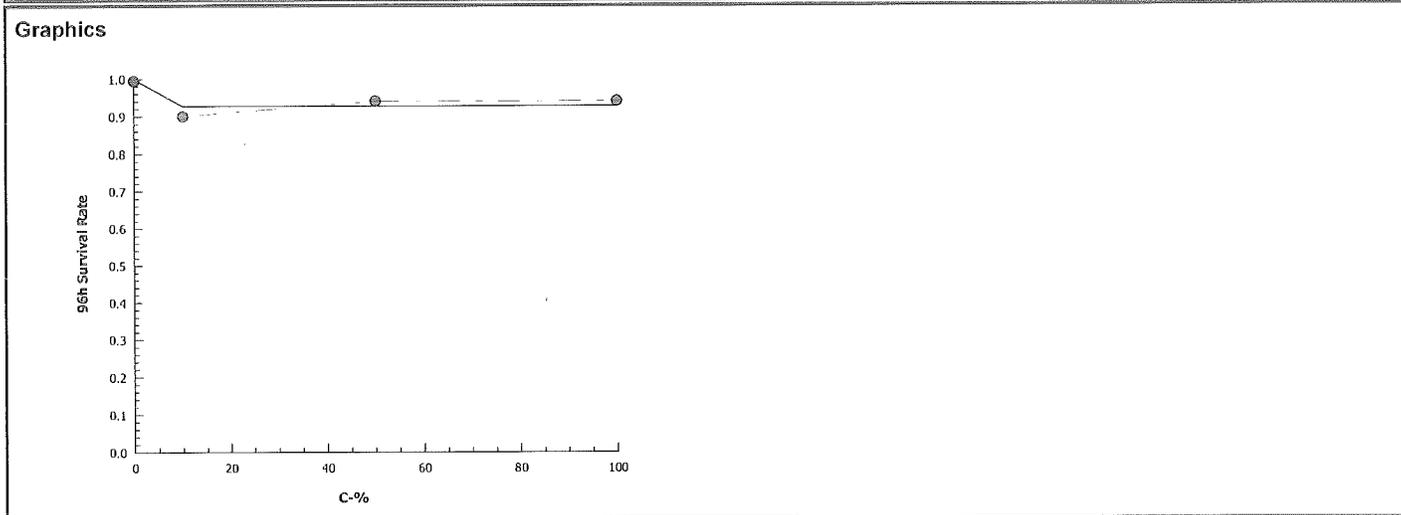

Inland Silverside 96-h Acute Survival Test			Nautilus Environmental (CA)		
Analysis ID: 15-8262-4760	Endpoint: 96h Survival Rate	CETIS Version: CETISv1.8.7			
Analyzed: 06 Mar-18 16:10	Analysis: Linear Interpolation (ICPIN)	Official Results: Yes			

Sample Note: Sample Collection Date: 1/18/18, 16:20 – Sample Receipt Date: 1/22/18, 12:34
