### SUBJECT: Phase I Initial Site Assessment for the Park Avenue Bridge Replacement Project located in the City of Newport Beach, California

To Whom It May Concern:

RBF Consulting (RBF) is pleased to submit this Phase I Initial Site Assessment (ISA) for the above referenced project, herein referenced as the "subject site." The goal of this Phase I ISA is to identify recognized environmental conditions (RECs) associated with the subject site. This Phase I ISA has been prepared for the sole use of the **City of Newport Beach** and the **California Department of Transportation-District 12** for the above-referenced subject site. Neither this Phase I ISA, nor any of the information contained herein, shall be used or relied upon for any purpose by any person or entity other than the **City of Newport Beach** and the **California Department of Transportation-District 12**.

The Phase I ISA was prepared using methods consistent with the ASTM International (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments, the California Department of Transportation's Standard Environmental Reference (SER), the scope of services, and inherent limitations presented in our proposal. The Phase I ISA is not intended to present specific quantitative information as to the actual presence of hazardous substances on or adjacent to the subject site, but is to identify RECs based on available information.

Should you or your staff have any questions or concerns after reviewing the enclosed report, please do not hesitate to contact me at 949/855-5747.

Sincerely,

Kristen Bogue Environmental Professional Planning/Environmental Services

## STATEMENT OF ENVIRONMENTAL PROFESSIONAL

I [We] declare that, to the best of my [our] professional knowledge and belief, I[we] meet the definition of Environmental Professional as defined in §312.10 of Title 40, Code of Federal Regulations (CFR) 312 and I[we] have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I[we] have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Signature of RBF Environmental Professional Kristen Bogue

# EXECUTIVE SUMMARY

The proposed Park Avenue Bridge Replacement Project is located at the existing Park Avenue bridge (over the Grand Canal) and the vicinity of the Balboa Avenue and the Grand Canal (herein referenced as the "subject site"), within the City of Newport Beach (City), Orange County, State of California (Section 35, Range 10 West [R.10W], Township 6 South [T.6S], San Bernardino Base and Meridian [SBBM]). Overall, the subject site is situated within a developed area of the southern portion of the City. Specifically, the subject site consists of a bridge structure, transportation uses and associated public right-of-way (ROW), and the Grand Canal. No new areas of ROW are required. Currently, the Park Avenue Bridge is the only connection between Balboa Island and Little Balboa Island, traversing over the Grand Canal in an east-west direction. The optional Temporary Bridge site is bounded by the Grand Canal to the north and south and Balboa Avenue to the east and west. Both bridge sites are further surrounded by single-family residential uses in all directions. Commercial uses are present along Marine Avenue.

This ISA was conducted in accordance with the ASTM International (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments (Standard Practice) and satisfies the requirements of 40 Code of Federal Regulations (CFR) Part 312 titled *Standards and Practices for All Appropriate Inquiries*, as required under Section 101(35)(B)(ii) and (iii) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The purpose of conducting this Phase I ISA is to identify Recognized Environmental Conditions (RECs).

### FINDINGS AND OPINIONS

RBF Consulting's (RBF's) findings and opinions are based upon a review of reasonably ascertainable referenced material available during the preparation of this Phase I ISA, which included a review of historical aerial photographs, historical topographic maps, regulatory databases, and other documentation, as well as interviews and site reconnaissance. Table E-1, *Phase I ISA Findings, Opinions, and Conclusions,* summarizes RBF's findings, opinions, and conclusions made during the preparation of this Phase I ISA.

Table E-1				
Phase I ISA Findings, Opinions, and Conclusions				

Finding	Opinion	Conclusion <sup>1</sup>
Current On-Site Uses		
Bridge Structures (Asbestos-Containing Materials)	As ACMs are commonly known to be used in building materials for bridge structures, ACMs may be present in the on-site bridge structures (constructed prior to 1934). No visible evidence to suggest the release of ACMs into the environment was observed. Therefore, it is RBF's opinion that the on-site bridge structure have not resulted in a REC on the subject site as a result of ACMs. Although RBF has determined that the on-site bridge structure has not resulted in a REC on the subject site as a result of ACMs, a recommendation for potential ACMs in the on-site bridge structure has	No REC
Bridge Structures (Lead-Based Paints)	been included in this ISA. As LBPs are commonly known to be used in building materials for bridge structures, LBPs may be present in the on-site bridge structure, which was constructed prior to 1934. No visible evidence to suggest the release of LBPs into the environment was observed. Therefore, it is RBF's opinion that the on-site bridge structure has not resulted in a REC on the subject site as a result of LBPs. Although RBF has determined that the on-site bridge structure has not resulted in a REC on the subject site as a result of LBPs, a	No REC
Traffic Striping Material	recommendation for potential LBPs in the on-site bridge structure has been included in this ISA. LBPs were commonly used in traffic striping materials before the discontinued use of lead chromate pigment in traffic striping/marking materials and hot-melt thermoplastic stripe materials (discontinued in 1996 and 2004, respectively). RBF observed traffic striping within the boundaries of the subject site during the April 29, 2014 site visit. Thus, the potential for LBPs to be present on-site as a result of traffic striping is likely. As the on-site striping materials are currently contained, and no visible evidence to suggest the release of LBPs into the environment was observed during the site visit, it is RBF's opinion that the likely presence of LBPs in traffic striping materials is not a REC at the time of this Phase I ISA. Although RBF has determined that the on-site striping materials have not resulted in an REC on the subject site as a result of LBPs, a	No REC
Transformers	<ul> <li>Pole-mounted transformers and pad-mounted utility boxes were noted on-site during the April 29, 2014 site visit. No evidence of dielectric fluid or staining was noted on-site. It is the opinion of RBF that the on-site transformers and other electrical utilities have not resulted in an REC on the subject site. A recommendation has been included in this ISA in order to ensure safety concerns during construction with regard to potential PCBs in on-site transformers and other utilities.</li> </ul>	No REC

# Table E-1 (continued)Phase I ISA Findings, Opinions, and Conclusions

Finding	Opinion	Conclusion <sup>1</sup>
Past On-Site Uses		
Aerially Deposited Lead	Based on the low number of vehicles traveling through the subject site (a residential collector road) and developed nature of the surrounding area (mostly paved surfaces and the Grand Canal), it is the opinion of RBF that the potential for lead contamination to exist within exposed soils on-site due to aerially deposited lead is unlikely. It is RBF's opinion that there is no REC on the subject site as a result of aerially deposited lead.	No REC
Current Adjoining Properties		
Residential Uses	Based on available information reviewed as part of this Phase I ISA, current adjoining properties consist of residential uses. Based on the EDR database report, no known corrective action, restoration, or remediation has been planned, is currently taking place, or has been completed on any known adjoining properties. Adjoining properties do not appear to have been under investigation for violation of any environmental laws, regulations, or standards, as identified in the databases reported by EDR. Thus, it is the opinion of RBF that no REC has resulted from current adjoining properties.	No REC
Past Adjoining Uses		
Residential Uses	Based on available documentation obtained and the April 29, 2014 site visit, off-site uses appear to have consisted of residential uses, similar to existing conditions. Based on the evidence of past uses associated with adjoining properties reviewed as part of this ISA, it is the opinion of RBF that no REC has resulted at the subject site as a result of adjoining past uses.	No REC
Current and Past Adjacent Uses	6	
Drycleaner Facilities (Bayside Cleaners located at 1056 Bayside Drive)	This property is located approximately 1,000 feet (0.19-mile) and up- gradient to the northwest of the subject site and is listed in the SLIC, Orange Co. Industrial Site, and DRYCLEANERS databases. The site is reported SLIC released Tetrachloroethylene to soil. This case was reported closed on March 17, 1999. Based on Orange Co. Industrial Site database, closure certification was issued for a release of Perchloroethylene. According to EDR, this site has been used for dry cleaning and laundry services (except Coin Operated) since 1988. RBF contacted the Bayside Cleaners to obtain information regarding their cleaning method and whether they had chemical releases in the past. Based on the interview conducted with staff, cleaning activities are performed at this property and this facility has operated at this property for more than 30 years. Staff stated that they do not have any knowledge pertaining to whether or not a past chemical release has or did occur in association with this drycleaner facility. Based on their website, their operations recently switched to a new Ecolab laundry system, in which the detergents used are now biodegradable.	No REC

## Table E-1 (continued)Phase I ISA Findings, Opinions, and Conclusions

Finding	Opinion	Conclusion <sup>1</sup>	
	Although this property is located approximately 1,000 feet up-gradient of the subject site, this property has achieved case closure of the reported release to soil. Further, although this site has operated for over 30 years and handled TCE at this time, the site is located approximately 1,000 feet from the subject site and is separated by a water body (Newport Bay). Thus, it is the opinion of RBF that even if this off-site property has contaminated groundwater, this contamination would not be at the subject site due to intervening water bodies. Thus, it is RBF's opinion that this off-site adjacent dry cleaner facility has not resulted in a REC at the subject site.		
Acquisition Summary			
No New ROW	There is no proposed ROW acquisition associated with the proposed project; therefore, there is no potential for an REC at the subject site as a result of new ROW acquisition.	No REC	
Notes:			
1. The following definitions apply to t	he Conclusions column identified above.		
REC – The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.			
CREC – A recognized environmental condition (REC) resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).			
De minimis – A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not RECs nor controlled recognized environmental conditions (CRECs).			
HREC – A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical environmental condition (HREC), the environmental professional must determine whether the past release is a REC at the time the Phase I ISA is conducted (for example, if the Environmental Professional considers the past release to be a REC at the time the Phase I ISA is conducted, the condition shall be included in the conclusions section of the report as a REC.			

### CONCLUSIONS

RBF has performed a Phase I ISA in conformance with the scope and limitations of ASTM E 1527-13 Standard Practice for the Park Avenue Bridge Replacement Project, located in the City of Newport Beach, California, the subject site. Any exceptions to, or deletions from, this practice are described in <u>Section 1.5</u>, <u>Limitations</u>, <u>Deviations</u>, and <u>Exceptions</u>, of this Phase I ISA. This Phase I ISA has revealed no evidence of RECs in connection with the subject site.

### RECOMMENDATIONS

The following recommendations are based on the findings, opinions, and conclusions noted during the course of this ISA. It is the opinion of RBF Consulting that the following recommendations be implemented:

- If unknown wastes or suspect materials are discovered during construction by the contractor, which he/she believes may involve hazardous waste/materials, the contractor shall:
  - Immediately stop work in the vicinity of the suspected contaminant, removing workers and the public from the area;
  - Notify the Project Engineer of the implementing agency;
  - Secure the areas as directed by the Project Engineer; and
  - Notify the implementing agency's Hazardous Waste/Materials Coordinator.
- <u>Asbestos Containing Materials (On-Site Bridge Structure)</u>: Although RBF has determined that the on-site structure has not resulted in a REC on the subject site as a result of potential ACMs, it is the opinion of RBF that when demolition/modification of the bridge structure occurs, asbestos testing should be conducted at the time of demolition/modification by a certified specialist retained by the City of Newport Beach and/or its consultant/contractor. If asbestos is present, the certified asbestos abatement specialist should monitor the disposal of the ACMs as they are uncovered.
- <u>Lead-Based Paint (On-Site Bridge Structure)</u>: Although RBF has determined that the onsite bridge structure has not resulted in a REC on the subject site as a result of LBPs, it is the opinion of RBF that when construction activities result in demolition or modification of the bridge structure, the generated waste should be disposed of at an appropriate, permitted disposal facility as determined by a lead specialist retained by the City of Newport Beach and/or its consultant/contractor. The City of Newport Beach and/or its consultant/contractor would be responsible for containing/transporting and properly disposing of the waste in accordance with the Federal, State, and local laws and regulations.
- <u>Disturbance of Traffic Striping</u>: Although RBF has determined that the on-site roadways containing traffic striping have not resulted in an REC at the subject site as a result of LBPs, it is the opinion of RBF that should construction activities result in the disturbance of traffic striping materials, the generated wastes should be disposed of at an appropriate, permitted disposal facility as determined by a lead specialist retained by

the City of Newport Beach and/or its consultant/contractor. The City of Newport Beach and/or its consultant/contractor would be responsible for containing/transporting and properly disposing of the waste in accordance with the Federal, State, and local laws and regulations.

• <u>PCBs</u>: Although RBF has determined that the on-site transformers and electrical utilities have not resulted in an REC on the subject site, it is RBF's opinion that any transformer/electrical utilities to be relocated/removed during site construction/demolition should be conducted under the purview of the local purveyor, as coordinated by the City of Newport Beach and/or its consultant/contractor, to identify property-handling procedures regarding potential PCBs, if applicable.

# SECTION 1.0 INTRODUCTION

The proposed Park Avenue Bridge Replacement Project is located at the existing Park Avenue bridge (over the Grand Canal) and the vicinity of the Balboa Avenue and the Grand Canal (herein referenced as the "subject site"), within the City of Newport Beach (City), Orange County, State of California (Section 35, Range 10 West [R.10W], Township 6 South [T.6S], San Bernardino Base and Meridian [SBBM]) (refer to Exhibit 1, <u>Regional Vicinity</u>). Overall, the subject site is situated within a developed area of the southern portion of the City (refer to Exhibit 2, <u>Site Vicinity</u>). Specifically, the subject site consists of a bridge structure, transportation uses and associated public right-of-way (ROW), and the Grand Canal (refer to Exhibit 3, <u>Subject Site</u>). No new areas of ROW are required. Currently, the Park Avenue Bridge is the only connection between Balboa Island and Little Balboa Island, traversing over the Grand Canal in an east-west direction. The optional Temporary Bridge site is bounded by the Grand Canal to the north and south and Balboa Avenue to the east and west. Both bridge sites are further surrounded by single-family residential uses in all directions. Commercial uses are present along Marine Avenue.

## **1.1 PROJECT DESCRIPTION**

## 1.1.1 PURPOSE AND NEED

The existing Park Avenue Bridge is over 80 years old and does not meet current bridge design and seismic safety standards. The City has identified structural and functional deficiencies with the bridge, such as severely deteriorated concrete in girders, pile caps, and piles. As such, through the California Department of Transportation (Caltrans) Sufficiency Rating process, Caltrans has identified the bridge as "functionally obsolete". The proposed project would construct a new bridge meeting current engineering standards in order to enhance the safety of motorists, bicyclists, and pedestrians in the project area.

4/24/14 JN 130307-20157 MAS

### **1.1.2 PROJECT DESCRIPTION**

The proposed project includes the demolition of the existing Park Avenue Bridge and construction of an improved seismically-reinforced bridge over the Grand Canal. The primary components of the project are as follows:

- **Precast Post-Tensioned Bridge Structure.** The proposed project would implement a precast post-tensioned bridge structure at the project site. The new bridge would remain 100 feet long and would include 11-foot vehicle lanes and 6-foot raised sidewalks. The proposed bridge would be slightly wider than the existing bridge, with a width of approximately 36 feet (compared to the existing width of approximately 30 feet). The bridge would be supported by abutments at each bank of the canal and two bents comprised of 24-inch diameter piles within the canal. The number of spans associated with the bridge would be reduced from the current five to the proposed three. The improved bridge structure would be positioned within existing City ROW, and does not include nor require any ROW acquisition. All utilities attached to the existing bridge structure would be relocated during construction, and would be concealed and protected within utility openings in the new bridge. It should be noted that the City proposes to rebuild the immediate adjacent deteriorating seawalls at the bridge abutment as part of final design and construction.
- Vertical Curve. The profile of the existing bridge is on a vertical curve, which provides sufficient freeboard between the bridge and the high water surface of the canal. The vertical curve also accommodates boat navigation. The existing vertical curve provides a design speed of 24 miles per hour (MPH), which does not meet the American Association of State Highway and Transportation Officials (AASHTO) criteria of 25 MPH for this classification of roadway. In order to meet the AASHTO criteria, the bridge would need to be lowered by six inches at the crest of the vertical curve, which would not provide adequate freeboard between the bridge and the high water surface of the canal. The lowering of the bridge profile would also not provide adequate freeboard for boat navigation. Because the travel speeds on Balboa Island and Little Balboa Island are relatively low, it was decided that the proposed bridge structure would maintain the existing vertical curve profile and match the existing freeboard.
- ADA Switchback Ramps. ADA-compliant switchback ramps are currently provided from the at-grade sidewalks to the bridge-mounted sidewalks to the east and west of the existing Park Avenue Bridge. Both existing switchback ramps on the east side of the Grand Canal have a two-foot landscape strip that would be eliminated to accommodate the proposed bridge structure. The switchback ramps on the west side of the existing

bridge are currently five feet, six inches wide; the project would reduce the width of each switchback ramp by one foot, resulting in four feet, six inch-wide switchback ramps. Reducing the switchback ramps by two feet on all sides of the bridge to accommodate the wider traffic lanes and sidewalks.

• **Bridge Architecture.** The proposed bridge architecture would generally be consistent with the existing bridge to maintain the character of the project area. Entry monumentation would be given special attention in the design, providing a combination of landscaping and appropriate signage as an entrance to Little Balboa Island. Bridge lighting would be provided for both pedestrian safety and architectural character. The existing style of concrete light poles and lamps would replicate the existing luminaires and would line both sidewalks.

The plan, cross section, profile grade, and elevation of the proposed bridge are depicted on Exhibit 4, *Park Avenue Bridge Site Plan*.

As noted above, all improvements would occur within existing City ROW and no ROW acquisition would be required. Temporary construction easements (TCEs) may be required at two residential driveway locations (i.e., the two dwelling units nearest the project site on Little Balboa Island, adjacent to Grand Canal). No construction activities would occur on these residential properties; however, the TCEs would be required since access to these two driveways would be temporarily restricted during a portion of the construction process. Access to the two nearest alleys parallel to the Grand Canal (one on Balboa Island and one on Little Balboa Island) may require a temporary detour during a portion of the construction process; however, these alleys would remain accessible at all times via alternative access points further north and south.

### 1.1.2.1 Construction Methodology

Since the Park Avenue Bridge is the only connection between Balboa Island and Little Balboa Island, access over the Grand Canal must be maintained at all times. The City has identified two potential options for construction of the new bridge: 1) stage construction, where the Park Avenue Bridge would be demolished and reconstructed one half at a time; and 2) installation of a temporary bridge at Balboa Avenue, which would allow for demolition of the entire Park Avenue Bridge at one time and reconstruction in a single phase. These methodologies are further described below:

PARK AVENUE BRIDGE REPLACEMENT PROJECT • PHASE I ISA Park Avenue Bridge Site Plan

Exhibit 4

### Stage Construction Option

The stage construction methodology would be phased such that approximately half the bridge would remain open for vehicle, bicycle, and pedestrian use at all times. Boat access along the Grand Canal beneath the bridge would also be maintained continuously. Existing utilities along the bridge would be relocated to allow for demolition of half the bridge while maintaining utility service throughout the duration of the construction process.

Construction would be phased as follows:

- 1. Removal of 13 feet of the existing bridge, with 17 feet of the bridge remaining for a 4-foot sidewalk, 2-foot concrete barrier, and 10-foot travel lane.
- 2. Construct 15 feet of new bridge.
- 3. Relocate utilities and traffic to the new structure, which would consist of a temporary 4-foot sidewalk and 11-foot travel lane. A temporary cantilevered pedestrian walkway would need to be constructed onto the exterior of the new bridge to allow for pedestrian and bicycle travel.
- 4. Remove the remainder of the existing bridge.
- 5. Complete construction of approximately 21 feet of the new bridge.

Since the phased construction would provide for a single 10-foot travel lane, one-way traffic would be controlled by a temporary traffic signal to allow for alternating travel in each direction. Emergency response vehicles would have preemptive control over the traffic control system. As noted above, access over the Grand Canal would be maintained at all times throughout the duration of construction.

Bridge construction activities would be facilitated by barge-mounted equipment in the Grand Canal. Although dredging would be necessary within the canal to accommodate the barge platforms, the City is currently developing a separate project to dredge the Grand Canal and it is scheduled to occur prior to initiation of construction of the proposed bridge replacement. Utilities would remain in full service throughout the construction period and the relocations would be coordinated as part of the stage construction. Utilities within the portion of the bridge that would be removed in the first stage would be relocated to the remaining portion of the existing bridge. In the second stage of construction, all utilities would be relocated to the new bridge structure constructed in the first phase. The stage construction option would require approximately 12 months for completion.

### **Temporary Bridge Option**

This approach would involve construction of a temporary bridge over Grand Canal at Balboa Avenue; refer to <u>Exhibit 5</u>, <u>Balboa Avenue Temporary Bridge Option</u>. Balboa Avenue is a local twolane roadway (one vehicle lane and sidewalk in each direction) trending in an east-west direction across Balboa Island and Little Balboa Island. There is no bridge crossing over the Grand Canal along Balboa Avenue, and the roadway currently terminates at each end of the canal. This location is immediately surrounded by single-family residential uses on all sides. Retail/commercial uses are situated to the west along Marine Avenue.

The temporary bridge would maintain access to Little Balboa Island with two 10-foot lanes of traffic. No form of additional traffic control would be necessary once the temporary bridge is in place. Bicycle and pedestrian access would also be provided via a 5-foot wide walkway to be located adjacent to the vehicle travel lanes. The temporary bridge includes ramps for ADA compliance at the ends of walkways providing access northerly along the boardwalks and also easterly/westerly along Balboa Avenue.

Construction of the temporary bridge includes temporary piles within Grand Canal. Approximately eight temporary piles would be located within the channel (four piles on each side of Grand Canal). The piles would be located approximately five feet away from the existing seawall, and the piles would be spaced approximately three to four feet apart. It is expected that the piles would be a maximum of 18 inches in diameter. The proposed temporary piles would vibrate into place in lieu of driving to minimize noise/vibration impacts to adjacent receptors. Approximately six parking spaces would be temporarily affected by implementing this option.

Under the temporary bridge option, bridge construction activities would be facilitated from the adjacent approaches on Park Avenue and Balboa Avenue for the replaced bridge and temporary bridge, respectively. Construction activities within the Grand Canal would include geotechnical investigations, reconstruction of the seawall within the project limits, and the removal and reconstruction of the bridge piers. Utilities would remain in full service throughout the construction period and the relocations would be coordinated as part of the bridge removal and reconstruction. Since the temporary bridge option would allow for the complete demolition of the existing Park Avenue Bridge, utilities within the existing bridge would be relocated to a temporary "utility bridge" immediately adjacent to the existing bridge

PARK AVENUE BRIDGE REPLACEMENT PROJECT • PHASE I ISA Balboa Avenue Temporary Bridge Option

5/6/14 JN 130307-20157 MAS

prior to demolition. After construction of the new bridge, the utilities would be relocated to the new bridge.

Construction of the temporary bridge at Balboa Avenue would occur within existing City ROW and no ROW acquisition would be required.

Utilizing the temporary bridge option at Balboa Avenue, the replacement of the Park Avenue Bridge would take approximately 10 months to complete.

### 1.1.3 PROPOSED RIGHT-OF-WAY ACQUISITION

There is no proposed ROW acquisition associated with the project.

## **1.2 PURPOSE OF THE ISA**

The purpose of conducting this ISA is to identify Recognized Environmental Conditions (RECs) as defined by the ASTM International (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments (Standard Practice). The ASTM E 1527-13 Standard Practice defines the term REC as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not RECs."

This Phase I ISA was conducted in accordance with the ASTM E 1527-13 Standard Practice and satisfies the requirements of 40 Code of Federal Regulations (CFR) Part 312 titled *Standards and Practices for All Appropriate Inquiries*, as required under Section 101(35)(B)(ii) and (iii) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The purpose of conducting an All Appropriate Inquiries (AAI) investigation into the previous ownership and uses of a property is to meet the provisions necessary for the innocent landowner, contiguous property owner, or bona fide prospective purchaser to qualify for certain landowner liability protections under CERCLA. To assist in understanding the terminology contained in this Phase I ISA, a glossary of terms associated with the ASTM E 1527-13 Standard Practice is provided in <u>Appendix A</u>, <u>ASTM Terminology</u>.

## **1.3 DETAILED SCOPE OF SERVICES**

This scope of work follows the ASTM E 1527-13 Standard Practice. The ASTM E 1527-13 Standard Practice outlines a procedure for completing Phase I ISAs that includes review of

Federal, tribal, State, and local government records; site reconnaissance; interviews with current owners, operators, occupants, and government officials; and report preparation. This practice does not include any testing or sampling of materials (for example, soil, water, air, building materials, etc.). This Phase I ISA is not intended to provide specific qualitative or quantitative information as to the actual presence of hazardous substances at the subject site, but is to merely identify the potential presence based on available information.

## **1.4 SIGNIFICANT ASSUMPTIONS**

Unless stated otherwise in this Phase I ISA, RBF assumes that groundwater flow follows the topography.

In lieu of reasonably available public information pertaining to groundwater contamination, RBF assumes that groundwater plume dimensions are within the 90<sup>th</sup> percentile of plumes determined by research conducted as part of ASTM E 2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in real Estate Transactions, which is described in detail in <u>Table 1-1</u>, <u>Groundwater Plume Dimension Assumptions</u>.

Chemical Contamination	Length of Plume Up- Gradient From Source	Length of Plume Down- Gradient from Source	Maximum Width of Plume From Source		
Chemical of Concern	100 feet	1,760 feet	365 feet		
Petroleum Hydrocarbon Chemical of Concern					
With Free Product	100 feet	528 feet	165 feet		
Dissolved	100 feet	528 feet	95 feet		
Notes: These dimension assumptions are based on research conducted as part of ASTM E 2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in real Estate Transactions, which has determined that 90 percent of plumes are these dimensions or less. Source: ASTM, Screening for Vapor Encroachment onto Properties Involved in Real Estate Transactions Course, November 14, 2013.					

Table 1-1Groundwater Plume Dimension Assumptions

## 1.5 LIMITATIONS, DEVIATIONS, AND EXCEPTIONS

RBF was unable to identify, within a five year interval, when the on-site bridge structure was constructed on-site. Although RBF did not achieve data within a five year interval of a change in use at the subject site, no other records reviewed as part of this Phase I ISA has suggested that land uses other than those noted have been associated with the subject site.

An adjacent dry cleaner of concern has been reported in regulatory databases. However, due to the nature of the regulatory databases, it is the opinion of RBF that additional file reviews for

this property would not provide additional information relative to determining the potential for a REC at the subject site as a result of this off-site dry cleaner facility. Thus, no file reviews were conducted for this off-site dry cleaner site.

Further, no additional scope items, or items outside of the scope of a Phase I ISA E 1527-13 Standard Practice, were conducted as part of this Phase I ISA.

## **1.6 USER RESPONSIBILITIES**

This Phase I ISA does not satisfy continuing obligations under CERCLA liability protections provided for innocent landowners, bona fide prospective purchasers, and contiguous property owners, which includes, but is not limited to, duties required after property acquisition (i.e., compliance with land use restrictions and institutional controls, undertaking "reasonable steps" with respect to hazardous substances releases, compliance with other obligations such as reporting obligations and information requests, etc.).

ASTM E 1527-13 Standard Practice defines the user as "the party seeking to use Practice E 1527 to complete an environmental site assessment of the property. A user may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager." The purpose of this section is to describe tasks to be performed by the user that will help identify the possibility of recognized environmental conditions in connection with the subject site. These tasks do not require the technical expertise of an environmental professional and are not required to be performed by environmental professional performing a Phase I ESA [or ISA]. The user questionnaire utilized within this Phase I ISA is optional to the user and aids the environmental professional in gathering information from the user that may be material to identifying RECs (refer to <u>Section 2.0</u>, <u>User Provided Information</u>, for a discussion of the User Questionnaire conducted as part of this Phase I ISA. It should be noted that the following tasks are required, by the user of this Phase I ISA, to satisfy the requirements of conducting all appropriate inquiries.

### 1.6.1 REVIEW TITLE AND JUDICIAL RECORDS FOR ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS (AULS)

To meet the requirements of 40 CFR 312.20 and 312.25, a search for the existence of environmental liens and AULs that are filed or recorded against the property must be conducted. Environmental liens and AULs are legally distinct instruments and have very different purposes and both can commonly be found within recorded land title records (e.g.,

County Recorder/Registry of Deeds). The types of title reports that may disclose environmental liens and AULs include Preliminary Title Reports, Title Commitments, Condition of Title, and Title Abstracts. Chain of title reports will not normally disclose environmental liens or AULs. Environmental liens and AULs that are imposed by judicial authorities may be recorded or filed in judicial records only. In jurisdictions where environmental liens or AULs are only recorded or filed in judicial records, the judicial records must be searched for environmental liens and AULs. Any environmental liens and AULs known to the user should be reported to the environmental professional conducting a Phase I ESA (or ISA). Unless added by a change in the scope of work to be performed by the environmental professional (refer to Section 1.5, Limitations, Deviations, and Exceptions), this practice does not impose on the environmental professional the responsibility to undertake a review of recorded land title records and judicial records for environmental liens or activity and use limitations. The user should either (1) engage a title company or title professional to undertake a review of reasonably ascertainable recorded land title records and lien records for environmental liens or activity and use limitations currently recorded against or relating to the property, or (2) negotiate such an engagement of a title company or title professional as an addition to the scope of work to be performed by the environmental professional.

### 1.6.1.1 Reasonably Ascertainable Title and Judicial Records for Environmental Liens and Activity and Use Limitations

Environmental liens and AULs that are recorded or filed in any place other than recorded land title records are not considered to be reasonably ascertainable unless applicable Federal, tribal, State, or local statues, or regulations specify a place other than recorded land title records for recording or filing of environmental liens and AULs.

### **1.6.2** SPECIALIZED KNOWLEDGE OR EXPERIENCE OF THE USER

Users must take into account their specialized knowledge to identify conditions indicative of releases or threatened releases. If the user has any specialized knowledge or experience that is material to RECs in connection with the property, the user should communicate any information based on such specialized knowledge or experience to the environmental professional. The user should do so before the environmental professional conducts the site reconnaissance.

### **1.6.3** ACTUAL KNOWLEDGE OF THE USER

If the user has actual knowledge of any environmental lien or AULs encumbering the property or in connection with the property, the user should communicate such information to the environmental professional. The user should do so before the environmental professional conducts the site reconnaissance.

### **1.6.4 REASON FOR SIGNIFICANTLY LOWER PURCHASE PRICE**

In a transaction involving the purchase of a parcel of commercial real estate, the user shall consider the relationship of the purchase price of the property to the fair market value of the property if the property was not affected by hazardous substances or petroleum products. The user should try to identify an explanation for a lower price which does not reasonably reflect fair market value if the property were not contaminated, and make a written record of such explanation. Among the factors to consider will be the information that becomes known to the user pursuant to the Phase I ISA. The ASTM E 1527-13 Standard Practice does not require that a real estate appraisal be obtained in order to ascertain fair market value of the property. The user should inform the environmental professional if the user believes that the purchase price of the property is lower than the fair market value due to contamination. The user is not required to disclose the purchase price to the environmental professional.

# 1.6.5 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

Commonly known or reasonably ascertainable information within the local community about the property must be taken into account by the user. If the user is aware of any commonly known or reasonably ascertainable information within the local community about the property that is material to recognized environmental conditions in connection with the property, the user should communicate such information to the environmental professional. The user should do so before the environmental professional conducts the site reconnaissance. The user must gather such information to the extent necessary to identify conditions indicative of releases or threatened releases of hazardous substances or petroleum products.

### **1.6.6 DEGREE OF OBVIOUSNESS**

The user must consider the degree of obviousness of the presence or likely presence of releases or threatened releases at the property and the ability to detect releases or threatened releases by appropriate investigation including the information collected under the following sections within this Phase I ISA:

- Section 1.6.1, *Review Title and Judicial Records for Environmental Liens and Activity and Use Limitations (AULs)*;
- <u>Section 1.6.2</u>, <u>Specialized Knowledge or Experience of the User</u>;

- <u>Section 1.6.4</u>, <u>*Reason for Significantly Lower Purchase Price*;</u>
- Section 1.6.5, Commonly Known or Reasonably Ascertainable Information;
- Section 3.2, Standard Environmental Records Sources;
- Section 3.4, *Historical Use Information on the Subject Site and Adjoining Properties;*
- <u>Section 4.0</u>, <u>Site Reconnaissance</u>; and
- <u>Section 5.0</u>, <u>Interviews</u>.

### **1.6.7** OTHER

Either the user shall make known to the environmental professional the reason why the user wants to have the Phase I ISA performed or, if the user does not identify the purpose of the Phase I ISA, the environmental professional shall assume the purpose is to qualify for an LLP to CERCLA liability and state this in the report.

## 1.7 SPECIAL TERMS AND CONDITIONS

No special terms and conditions were identified for this scope of work.

## **1.8 USER RELIANCE**

The information and opinions rendered in this Phase I ISA are exclusively for use by City of Newport Beach and California Department of Transportation-District 12. RBF will not distribute or publish this report without the consent of the City of Newport Beach and/or California Department of Transportation-District 12, except as required by law or court order. The information and opinions expressed in this Phase I ISA are given in response to RBF's scope of services and limitations indicated above, and should be considered and implemented only in light of the scope of services and limitations. The services provided by RBF in completing this Phase I ISA were consistent with normal standards of the profession. No warranty, expressed or implied, is made.

# SECTION 2.0 USER PROVIDED INFORMATION

Per ASTM E 1527-13, the user of the Phase I ISA has an obligation to answer questions posed by RBF at the time of the Phase I ISA, in good faith, to the extent of his or her actual knowledge or to designate a key site manager to do so. If answers to questions are unknown or partially unknown to the user or such key site manager, this section shall not thereby deemed incomplete.

The City of Newport Beach (City) is the user of this Phase I ISA and has provided RBF with information regarding the proposed project (bridge replacement) for the subject site. The City has requested this Phase I ISA to support environmental documentation for the proposed project. Other information/documentation provided by the City is also referenced throughout this Phase I ISA, as applicable.

## 2.1 **PREVIOUS DOCUMENTS**

The user did not provide any previous documents, including but not limited, to the following during the course of this Phase I ISA:

- Environmental site assessments;
- Environmental compliance audit reports;
- Environmental permits;
- Registrations for underground and aboveground storage tanks;
- Material safety data sheets;
- Community right-to-known plan;
- Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans; facility response plans; etc.;
- Reports regarding hydrogeologic conditions on the property or surrounding area;
- Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property;
- Hazardous waste generator notices or reports;
- Geotechnical studies;
- Risk assessments; and
- Recorded AULs.

## 2.2 LITIGATION/ADMINISTRATIVE PROCEEDINGS

The user did not provide any information pertaining to any pending, threatened, or past litigation and/or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property during the course of this Phase I ISA.

## 2.3 GOVERNMENTAL NOTICES

The user did not provide any information pertaining to any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products during the course of this Phase I ISA.

## 2.4 ENVIRONMENTAL LIENS

The user did not provide any environmental lien information during the course of this Phase I ISA.

## 2.5 ACTIVITY AND USE LIMITATIONS

The user did not provide any activity and use limitation information during the course of this Phase I ISA.

## 2.6 SPECIALIZED KNOWLEDGE OR EXPERIENCE

The user did not provide any specialized knowledge or experience related to the subject site during the course of this Phase I ISA.

## 2.7 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

The user did not provide any commonly known or reasonably ascertainable information during the course of this Phase I ISA.

## 2.8 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The user did not report valuation reduction for environmental issues.

## 2.9 DEGREE OF OBVIOUSNESS

The user did not report any obvious indicators that point to the presence or likely presence of releases at the property during the course of this Phase I ISA.

## 2.10 REASON FOR PERFORMING PHASE I

This Phase I ISA has been requested by the California Department of Transportation, as part of the environmental clearance for the proposed project.

# SECTION 3.0 RECORDS REVIEW

## 3.1 PHYSICAL SETTING SOURCES

Physical setting sources typically provide information regarding geologic, hydrogeologic, hydrologic, or topographic characteristics of a property. The following information is primarily based on review of the United States Geological Survey (USGS) Newport Beach, California Quadrangle, dated 1965, photorevised in 1981, and a site inspection conducted by RBF on April 29, 2014. Other miscellaneous resources utilized within this section and throughout the Phase I ISA are referenced in <u>Section 7.0</u>, <u>*References*</u>.

### 3.1.1 SUBJECT SITE DESCRIPTION

### 3.1.1.1 Location

The subject site located at the existing Park Avenue Bridge and the vicinity of Balboa Avenue over the Grand Canal within the City (Section 35, R.10W, T.6S, SBBM) (refer to <u>Exhibit 1</u> and <u>Exhibit 2</u>).

### 3.1.1.2 Current Use(s) of the Subject Site

Currently, the subject site consists of a bridge structure, transportation uses and associated roadway ROW, and the Grand Canal.

### 3.1.1.3 Description of On-Site Structures and Roads

Park Avenue is a local two-lane roadway (one vehicle lane and sidewalk in each direction) trending in an east-west direction across Balboa Island and Little Balboa Island. The existing Park Avenue Bridge is approximately 100 feet long and 30 feet wide, and provides two 10-foot vehicle lanes with 5-foot raised sidewalks on each side.

The existing Park Avenue Bridge extends over the Grand Canal with a vertical curve profile; the vertical profile provides variable freeboard between the high water surface of the canal and allows for boat navigation beneath the bridge. Currently, the existing bridge structure consists of five 20-foot spans supported by precast concrete pile extensions at the piers and abutments. Each end of the bridge includes ADA-accessible ramps extending from the adjacent at-grade sidewalks to the bridge-mounted sidewalks. The bridge is illuminated by pole-mounted

luminaires on both sides of each bridge approach. Wet and dry utility conduits/pipelines extend across the Grand Canal and are attached to the underside of the existing bridge.

Balboa Avenue is a local two-lane roadway (one vehicle lane and sidewalk in each direction) trending in an east-west direction. Grand Canal traverses Balboa Avenue in a north-south direction, through the subject site.

### 3.1.2 TOPOGRAPHY

The USGS maps show geological formations and their characteristics, describing the physical setting of an area through contour lines and major surface features including lakes, rivers, streams, buildings, landmarks, and other factors that impact the spread of contamination. Additionally, the maps depict topography through color and contour lines and are helpful in determining elevations and site latitude and longitude.

Based on the USGS *Newport Beach, California* Quadrangle, dated 1965 and photorevised 1981, onsite topography is at sea level to approximately 5 feet above msl, is generally located at Balboa Island in Newport Bay. The subject site appears to consist of transportation uses (Park Avenue and Balboa Avenue, one bridge structure, and a canal). The existing bridge structure is located at Park Avenue. The canal feature is visible traversing the subject site in a north-south direction. Adjoining land uses appear to consist of developed land. A fire station is visible to the north of the subject site. Beacon Bay to the north and Balboa Reach to the south of the Balboa Island are also noted. No on-site pits, ponds, or lagoons are noted within the boundaries of the subject site.

### 3.1.3 CURRENT USES OF ADJOINING PROPERTIES

For the scope of this Phase I ISA, properties are defined and categorized based upon their physical proximity to the subject site. An adjoining property is considered any real property or properties the border of which is contiguous or partially contiguous with that of the subject site, or that would be contiguous or partially contiguous with that of the subject site but for a street, road, or other public thoroughfare separating them. An adjacent property is any real property located within 0.25 mile of the subject site's border. The following is a detailed description of each adjoining land use observed on April 29, 2014:

- <u>North</u>: Residential uses and Grand Canal are located to the north of the subject site.
- <u>East</u>: Transportation (Park Avenue and Balboa Avenue) and residential uses are located to the east of the subject site.
- <u>South</u>: Residential uses and Grand Canal are located to the south of the subject site.

• <u>West</u>: Transportation (Park Avenue and Balboa Avenue) and residential uses are located to the west of the subject site.

### 3.1.4 GEOLOGIC CONDITIONS

### 3.1.4.1 Geology

The USGS Geological Map Index was searched by EDR for available Geological Maps that cover the subject site and surrounding areas. These Geological Maps indicate geological formations that are overlaid on a topographic map. Some maps focus on specific issues (i.e., bedrock, sedimentary rocks, etc.) while others may identify artificial fills (including landfills). Geological maps can be effective in estimating permeability and other factors that influence the spread of contamination.

According to the *Newport Beach General Plan* (General Plan), adopted July 25, 2006, the geologic diversity of Newport Beach is strongly related to tectonic movement along the San Andreas Fault and its broad zone of subsidiary faults. This, along with sea level fluctuations related to changes in climate, has resulted in a landscape that is also diverse in geologic hazards. Some of the geologic units in the Newport Beach area, including both surficial soils and bedrock, have fine-grained components that are moderate to highly expansive. These materials may be present at the surface or exposed by grading activities. City of Newport Beach has a variety of coastal features ranging from replenished beach sands in West Newport, to steep bluffs comprised of sandstone and siltstone to the south of Corona del Mar.

According to the EDR GeoCheck Report, the land consists of a stratified sequence from the Cenozoic era.

### 3.1.4.2 Soils

The subject site is situated on the Myford association. The Myford association is nearly level to moderately steep, moderately well drained sandy loams that have strongly developed subsoil; on terraces. The U.S. Department of Agriculture (USDA) Soil Conservation Service (SCS) Soil Survey Maps were searched for available soils within the subject site. Two (2) soil types are reported to be within the boundaries of the subject site, which are described as follows:

• <u>Beaches (115)</u>: This soil consists of sandy, gravelly, or cobbly coastal shores that are washed and rewashed by tidal and wave action. These areas may be partly covered with water during high tides or stormy periods. Runoff is very slow, and the erosion hazard is high.

• <u>Water (227)</u>: A portion of the subject site lies atop water via a bridge structure.

### 3.1.4.3 Radon

Radon is a radioactive gas that is found in certain geologic environments and is formed by the natural breakdown of radium, which is found in the earth's crust. Radon is an invisible, odorless, inert gas that emits alpha particles, known to cause lung cancer. Radon levels are highest in basements (areas in close proximity to the soil) that are poorly ventilated. A radon survey was not included within the scope of this investigation. According to the "U.S. EPA Map of Radon Zones," the County of Orange is located within Zone 3, which has a predicted average indoor screening level of less than 2.0 Picocuries per liter (pCi/L). EPA recommends remedial actions when radon levels are greater than 4.0 pCi/L.

### 3.1.5 **BIOLOGICAL SETTING**

The biotic community that exists within the subject site consists of typical roadway ROW and the Grand Canal. Plant and animals in the area have been introduced by humans and are tolerant to urban land uses. The biological setting of the subject site appears to consist of minimal ornamental landscaping and that associated with the Grand Canal.

### 3.1.6 DRAINAGE/HYDROLOGY

### 3.1.6.1 Drainage

Due to the impervious nature of the subject site, drainage of the subject site is accomplished by overland sheet flow, which is generally toward the City's stormwater drainage system within the roadway ROW. Ultimately, drainage flows into the Grand Canal which is located on-site and ultimately the greater Newport Bay.

### 3.1.6.2 Flood Hazards

Flood Prone Area Maps published by the USGS show areas prone to 100-year floods overlaid on a topographical map. These maps are not considered the official Federal Emergency Management Agency (FEMA) flood maps; therefore, in cases where a property is located immediately adjacent to or within the flood prone boundary, a FEMA map should be obtained. According to the FEMA Flood Insurance Rate Map (FIRM), the subject site is located within the 100-year flood zone (refer to the <u>Appendix C</u>, <u>Documentation</u>).
### 3.1.6.3 Groundwater

Drainage is accomplished by overland sheet flow, ultimately flowing toward the Grand Canal. Based on the subject site location, within Newport Bay, RBF anticipates that groundwater is very shallow. No technical groundwater data was readily available for the subject site during the preparation of this ISA. As a result, RBF assumes groundwater at portions of the subject site located on the ground in the area follows topography, toward Newport Bay.

### 3.1.6.4 Water Wells

According to the EDR Database search, no water wells are noted within the boundaries of the subject site. Additionally, there are no water wells within one-mile radius of the subject site. EDR did identify available groundwater information locations, which identified that "Groundwater Flow Varies at Location", within a one-mile radius of the subject site.

# 3.2 STANDARD ENVIRONMENTAL RECORDS SOURCES

The governmental sources have been searched by EDR (at the request of RBF) for sites within the subject site and within an approximate one-mile radius of the subject site boundaries. Upon completion of their search, EDR provided RBF with their findings dated April 11, 2014. RBF makes no claims as to the completeness or accuracy of the referenced sources. Our review of EDR's findings can only be as current as their listings and may not represent all known or potential hazardous waste or contaminated sites. To reduce the potential for omitting possible hazardous material sites on the subject site and within the surrounding area, sites may be listed in this report if there is any doubt as to the location because of discrepancies in map location, zip code, address, or other information. Refer to <u>Appendix B</u>, <u>Database Records Searches</u>, for a listing and description of the Federal, tribal, State, and local records searched.

## 3.2.1 SUBJECT SITE

The lists that were reviewed did not report any regulatory properties within the boundaries of the subject site (<u>Exhibit 6</u>, <u>Overview Map</u>). No known corrective action, restoration, or remediation has been planned, is currently taking place, or has been completed on the subject site. The subject site has not been under investigation for violation of any environmental laws, regulations, or standards, as identified in the databases reported by EDR (refer to <u>Appendix B</u>, <u>Database Records Searches</u>).

Source: EDR, Inc., 2014

4/23/14 JN 130307-20157 MAS

PARK AVENUE BRIDGE REPLACEMENT PROJECT • PHASE I ISA

## 3.2.2 OFF-SITE PROPERTIES

Approximately nine listed regulatory sites are located within a one mile radius of the subject site and are listed in one or more of the regulatory databases listed in <u>Appendix B</u>, <u>Database</u> <u>Records Searches</u>. For a complete list of sites identified and their status, refer to <u>Appendix B</u>. Eight of the nine regulatory sites are considered to have a low potential of affecting the subject site for one or more of the following reasons: distance from the subject site, direction of anticipated groundwater flow, site status, and/or no contamination has been reported at the site. The following properties have been further evaluated due to the potential of these sites to impact groundwater underlying the subject site. Refer to <u>Table 3-1</u>, <u>Database Summaries</u>, for a description of regulatory databases discussed.

Database	Description	
DRYCLEANERS	The DRYCLEANERS database includes drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.	
Orange Co. Industrial Site	List of industrial site cleanups maintained by the Orange County Health Care Agency (HCA), including petroleum and non-petroleum spills.	
SLIC	The SLIC (Spills, Leaks, Investigations and Cleanup) program is designed to protect and restore water quality from spills, leaks, and similar discharges.	

Table 3-1 Database Summaries

## **Adjoining Properties**

The lists that were reviewed did not report any regulatory properties for adjoining properties to the subject site. No known corrective action, restoration, or remediation has been planned, is currently taking place, or has been completed on any known adjoining properties. Adjoining properties do not appear to have been under investigation for violation of any environmental laws, regulations, or standards, as identified in the databases reported by EDR (refer to <u>Appendix B</u>, <u>Database Records Searches</u>).

## Adjacent Properties

**1056 Bayside Drive (Bayside Cleaners):** This property is located approximately 1,000 feet (0.19-mile) and up-gradient to the northwest of the subject site and is listed in the SLIC, Orange Co. Industrial Site, and DRYCLEANERS databases. The site is reported SLIC released Tetrachloroethylene (PCE) to soil. This case was reported closed on March 17, 1999. Based on

Orange Co. Industrial Site database, closure certification was issued for a release of Perchloroethylene. According to EDR, this site has been used for dry cleaning and laundry services (except Coin Operated) since 1988.

## **3.3 FILE RECORD REVIEWS**

If the subject site or any of the adjoining properties are identified on one or more of the standard environmental record sources, pertinent regulatory files and/or records associated with the listing should be reviewed. The purpose of the regulatory file review is to obtain sufficient information to assist the environmental professional in determining if a REC, HREC, CREC, or a de minimis condition exists at the property in connection with the listing. If, in the environmental professional's opinion, such a review is not warranted, the environmental professional must explain the justification for not conducting the regulatory file review.

Based on the regulatory listings, provided by EDR, the following adjacent property is recommended for additional file review:

• <u>1056 Bayside Drive (Bayside Cleaners)</u>. This adjacent property has been noted as dry cleaning operations in the subject site vicinity and presents a concern to the subject site soley based on the EDR regulatory database search. Due to the nature of the regulatory databases, it is the opinion of RBF that additional file reviews for this property would not provide additional information relative to determining the potential for a REC at the subject site as a result of this off-site dry cleaner facility. Thus, no file reviews were conducted for this off-site dry cleaner site.

# 3.4 HISTORICAL USE INFORMATION ON THE SUBJECT SITE AND ADJOINING PROPERTIES

The objective of consulting historical sources is to develop a history of the previous uses of the subject site and surrounding area, in order to help identify the likelihood of past uses having led to RECs in connection with the subject site. The standard sources identified by ASTM E 1527-13 include aerial photographs, fire insurance maps, property tax files, recorded land title records (a chain-of-title), historical USGS topographic maps, local street directories, building department records, zoning/land use records, prior assessments, and other historical sources (i.e., any source or sources, other than those listed, that are credible to a reasonable person and that identify past uses of the property). The focus is on usage rather than ownership, which is why a chain-of-title is not sufficient by itself.

## 3.4.1 METHODOLOGY AND LIMITING CONDITIONS

#### 3.4.1.1 Methodology

Data failure (a subset of a data gap) occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the historical source review objectives have not been met.

#### USES OF THE PROPERTY

Per ASTM E 1527-13 Standard Practice, historical uses "shall be identified from the present, back to the property's obvious first development use including (agricultural and fill activities), or back to 1940, whichever is earlier." This task requires reviewing only as many of the standard historical sources as are necessary and both reasonably ascertainable and likely to be useful.

Historical information for the subject site was obtained from 1901 to the present. In 1901, the subject site appears to have consisted of vacant land. Sources reviewed have been cited throughout this section and are referenced in <u>Section 7.0</u>, <u>*References*</u>, of this Phase I ISA.

#### INTERVALS

Review of standard historical sources at less than approximately five year intervals is not required by ASTM E 1527-13 Standard Practice. If the specific use of the property appears unchanged over a period longer than five years, then it is not required by ASTM E 1527-13 Standard Practice to research the use during that period.

RBF was unable to identify, within a five year interval, when the on-site wooden bridge located at Park Avenue was constructed and when it was demolished. Additionally, RBF was unable to identify, within a five year interval, when the on-site Park Avenue Bridge structure (the existing bridge) was constructed. RBF was also unable to identify, within a five year interval, when Balboa Avenue, Park Avenue, and the Grand Canal were constructed on-site.

#### USES OF PROPERTIES IN SURROUNDING AREA

Per the ASTM E 1527-13 Standard Practice, uses in the area surrounding a property shall be identified in the Phase I ISA, but this task is only required to the extent that this information is revealed in the course of researching the property itself. If the environmental professional uses sources that include the surrounding area, surrounding uses should be identified to a distance

determined at the discretion of the environmental professional. Factors to consider in making this determination include, but are not limited to:

- The extent to which information is reasonably ascertainable;
- The time and cost involved in reviewing surrounding uses;
- The extent to which information is useful, accurate, and complete in light of the purpose of the records review;
- The likelihood of the information being significant to RECs in connection with the property;
- The extent to which potential concerns are obvious;
- Known hydrogeologic/geologic conditions that may indicate a high probability of hazardous substances or petroleum products migration to the property;
- How recently local development has taken place;
- Information obtained from interviews and other sources; and
- Local good commercial and customary practice.

Surrounding land uses have been noted throughout the Phase I ISA, as applicable, and are referenced accordingly.

#### 3.4.1.2 Limiting Conditions

RBF did not encounter any other conditions, other than those identified in Intervals above, that limited the historical use review during the course of this Phase I ISA.

## 3.4.2 STANDARD HISTORICAL SOURCES

#### 3.4.2.1 Historical Uses Summary

Based upon evaluation of the documented land use as demonstrated in the resources reviewed as part of this Phase I ISA, the subject site appears to have been vacant land in 1901 and 1902. Park Avenue, Balboa Avenue, Grand Canal, and a wooden bridge were constructed on-site by 1922. The on-site bridge structure was further improved in the late 1920's/early 1930's. Surrounding uses have consisted of primarily residential uses since approximately the 1930's. Refer to <u>Table 3-2</u>, <u>Historical Uses Summary</u>, for a detailed description of sources reviewed

#### Table 3-2 Historical Uses Summary

Year	On-Site Use	Surrounding Uses	Source
1901	The subject site appears to have consisted of vacant land associated with Newport Bay.	The general vicinity appears to consist of vacant land associated with Newport Bay. Two railroads connecting Newport Beach to other parts of the southern California are noted further to the west of the subject site. The Southern Pacific railroad trends in a northeast-southwest direction and the other railroad feature trends in a northwest- southeast direction. The San Joaquin Hills and Laguna Canyon are noted further to the east and Hollow Rock is visible to the south.	USGS Topographic Maps
1902	No changes noted.	No changes noted.	USGS Topographic Maps
1922	Park Avenue, Grand Canal, and a wooden bridge are visible on-site.	Adjoining properties to the subject site at Park Avenue appear to consist of vacant land. Spares structures are noted adjacent the subject site.	Sanborn Maps
1927	Balboa Avenue has been constructed.	Surrounding areas consist of vacant land and structures. With the exception of an adjoining building structure to the west of Grand Canal and south of Park Avenue, other adjoining properties appear to consist of vacant land.	Aerial Photographs
1928	Bridge Improvements Plan	No changes noted.	Interviews
1929	No changes noted.	Residential buildings have increased in the surrounding area. Masonic Childrens Home with separated boys and girls dormitories is visible to the east of the Grand Canal along Balboa Avenue to the south. A residential building adjoins the subject site to the west of the Grand Canal at Balboa Avenue. In addition, a residential building adjoins the subject site to the west of the Grand Canal at Park Avenue. Fire department, Station No. 8, is located along Marine Avenue. Gas/oil station is noted to the northwest of the intersection of Balboa Avenue (Central Avenue) and Marine Avenue.	Sanborn Maps
1935	No changes noted.	Buildings are noted in the surrounding area. The majority of the adjoining properties appear to consist of vacant land. 18 Highway is noted to the north. Corona del Mar, Balboa, and Balboa Beach are visible further to the south.	USGS Topographic Maps
1938	No changes noted.	Improvements have been increased in Balboa Island. Grading activities are noted in the vacant lands adjoining the Grand Canal.	Aerial Photographs

#### Table 3-2 (continued) Historical Uses Summary

Year	On-Site Use	Surrounding Uses	Source
1942	No changes noted.	Surrounding area consists of developed land. A paved road connects Balboa Island to the lands located to the north and east of the island.	USGS Topographic Maps
1945	The Park Avenue Bridge appears to have been improved.	A residential building adjoins the subject site to the east of the Grand Canal at Park Avenue. Gas/Oil station with Auto Services adjacent the subject site at Park Avenue (124 Marine Avenue is noted). Masonic Childrens Home (historically to the east of the Grand Canal at Balboa Avenue) has been replaced with residential uses. Gas/oil station (historically to the northwest of the intersection of Balboa Avenue and Marine Avenue) has been replaced with commercial use (restaurant). Gas/oil station is noted to the southwest of the intersection of Balboa Avenue and Marine Avenue.	Sanborn Maps
1946	No listings reported.	Listed surrounding uses include residential uses and commercial uses (e.g., Whites Coffee Shops and Market Spot)	City Directory
1947	No changes noted.	Residential uses are noted to the east and west of the Grand Canal.	Aerial Photographs
1950	No listings reported.	Listed surrounding uses include residential and commercial uses (e.g., Jax Inc. Beauty Salon).	City Directory
1951	No changes noted.	A post office (PO) is noted to the west of the subject site at Park Avenue. Two churches are noted to the west of Grand Canal. Bayside Drive and Pacific Coast Highway are visible further to the north.	USGS Topographic Maps
1952	No changes noted.	No changes noted.	Aerial Photographs
1955	No listings reported.	No changes noted.	City Directory
1959	No changes noted.	Residential development has increased in the surrounding area.	Sanborn Maps
1960	No listings reported.	No changes noted.	City Directory
1961	No changes noted.	No changes noted.	Sanborn Maps
1963	No changes noted.	Residential uses are noted within the lands to the north and east of Balboa Island.	Aerial Photographs
1965	No changes noted.	A fire station is visible to the west of the Grand Canal and north of the subject site. Jamboree Road is noted further to the north.	USGS Topographic Maps
1966	No listings reported.	No changes noted.	City Directory
1970	No listings reported.	No changes noted.	City Directory
1972	No changes noted.	No changes noted to the immediate vicinity of the subject site and in Balboa Island; however, development to the north and east of Balboa Island have increased.	USGS Topographic Maps Aerial Photographs

Year	On-Site Use	Surrounding Uses	Source
1975	No listings reported.	No changes noted.	City Directory
1980	No listings reported.	No changes noted.	City Directory
1981	No changes noted.	No changes noted.	USGS Topographic Maps
1983	No changes noted.	Surrounding areas further to the north of Balboa Island have been developed.	Aerial Photographs
1986	No listings reported.	Listed surrounding uses include residential and commercial uses (e.g., Power Sales Co located at 106 Abalone Avenue).	City Directory
1990	No changes noted.	Gas/oil station located at 124 Marine Avenue is no longer visible.	Aerial Photographs
1991	No listings reported.	Listed surrounding uses include residential and commercial uses (e.g., Island Girl).	City Directory
1995	No changes noted.	A new structure has been constructed at 124 Marine Avenue.	Aerial Photographs
2002	No listings reported.	No changes noted.	City Directory
2003	No listings reported.	No changes noted.	City Directory
2005	No changes noted.	No changes noted.	Aerial Photographs
2008	No listings reported.	No changes noted.	City Directory
2009	No changes noted.	No changes noted.	Aerial Photographs
2010	No changes noted.	No changes noted.	Aerial Photographs
2013	No listings reported.	No changes noted.	City Directory
	s an interval data gap, as described in <u>Sec</u> er to <u>Section 7.0, <i>References</i>, and Append</u>	c <u>tion 3.4.1.1, <i>Methodology</i></u> , Intervals. <u>dix C, <i>Documentation</i>, for full citation and documentation of s</u>	ources utilized in this table.

### Table 3-2 (continued) Historical Uses Summary

### 3.4.2.2 Property Tax Files

RBF searched the subject site for property data via First American Real Estate Solutions and the legal description for the subject site. This data typically provides current property ownership information and includes information regarding on-site improvements, zoning, land use, transfer of last sale, and other miscellaneous structural improvements. RBF searched for available property information via First American, RealQuest Property Data. However, no property data is available for the subject site, as the subject site consist of vacant land, transportation uses, and a canal, and does not include addresses or APNs.

### 3.4.2.3 Zoning/Land Use Records

Zoning/land use records generally consist of records of the local government in which the subject site is located and indicate the use permitted by the local government in particular zones within its jurisdiction. The records may consist of maps and/or written records. The subject

site consists of transportation land uses. According to the City of Newport Beach General Plan Circulation Element, Figure CE1, *Master Plan of Streets and Highways*, Park Avenue and Balboa Avenue are roadways.

### 3.4.2.4 California Department of Oil, Gas, and Geothermal Resources

RBF reviewed the California Department of Oil, Gas, and Geothermal Resources (DOGGR) online mapping system (on May 1, 2014), which indicates existing and historical oil and gas wells within the immediate vicinity of the subject site. Current well status for any well indicated in the online mapping system should be confirmed at the appropriate Division of Oil and Gas District Office. According to DOGGR, no oil/gas wells are located within the subject site. The subject site does not appear to be located within an oil field. One oil/gas well is located within a one-mile radius of the subject site. This listed oil/gas well is located approximately 3,300 feet to the northeast of the subject site and is plugged. The operator of this oil/gas well was Coalinga-Mohawk Oil Co. Oil Refineries, Inc. (refer to <u>Appendix C</u>, <u>Documentation</u>).

#### 3.4.2.5 Other Historical Sources

Other historical sources include miscellaneous maps, newspaper archives, and records in the files and/or personal knowledge of the property owner and/or occupants. No other sources were reviewed by RBF during the course of this Phase I ISA.

# SECTION 4.0 SITE RECONNAISSANCE

According to the ASTM E 1527-13 Standard Practice, the objective of the site reconnaissance is to obtain information indicating the likelihood of identifying RECs in connection with the subject site.

# 4.1 METHODOLOGY AND LIMITING CONDITIONS

## 4.1.1 METHODOLOGY

RBF performed a visual observation of readily accessible areas of the subject site and immediately adjoining properties on April 29, 2014. At this time, the subject site was visually inspected. Refer to <u>Exhibit 7</u>, <u>On-Site Photographs</u>, and <u>Exhibit 8</u>, <u>Off-Site Photographs</u>, for photograph documentation conducted during the site visit. The subject site was viewed from all public thoroughfares. If roads or paths with no apparent outlet are observed on the subject site, the use of the road or path was identified to determine whether it was likely to have been used as an avenue for disposal of hazardous substances or petroleum products.

## 4.1.2 LIMITING CONDITIONS

RBF did not encounter limiting conditions during the April 29, 2014 site visit.

# 4.2 ON-SITE OBSERVATIONS

## 4.2.1 DESCRIPTION OF ON-SITE USES

The subject site consists of transportation uses and associated roadway ROW as well as the Grand Canal. No structures (other than the Park Avenue Bridge) are located within the boundaries of the subject site.

## 4.2.2 DESCRIPTION OF ON-SITE STRUCTURES AND ROADS

The Park Avenue Bridge structure is located within the subject site at Park Avenue. Areas of ROW encompass sidewalk, ADA switchback ramps, and minimal ornamental landscaping. Onsite roadways consist of Park Avenue and Balboa Avenue, both trending in an east-west direction.

View of the existing on-site bridge structure at Park Avenue looking east.

View of the existing on-site bridge structure at Park Avenue looking west.

View of the existing on-site bridge structure and Grand Canal.

View of the Grand Canal at the proposed temporary bridge structure location along Balboa Avenue looking west.

PARK AVENUE BRIDGE REPLACEMENT PROJECT • PHASE I ISA On-Site Photographs

View of residential uses to the west of Grand Canal at Park Avenue.

View of residential uses and the Grand Canal from Balboa Avenue looking to the south.

View of residential uses and the Grand Canal to the south of the existing on-site bridge structure at Park Avenue.

View of the commercial use to the northeast of the intersection of Balboa Avenue and Marine Avenue.

PARK AVENUE BRIDGE REPLACEMENT PROJECT • PHASE I ISA Off-Site Photographs

## 4.2.3 DESCRIPTION OF PAST USES OF THE SUBJECT SITE

Based on review of aerial photographs, past uses of the subject site are reported to consist of transportation and canal uses similar to the existing condition. No evidence to suggest the presence of past uses was noted during the site visit.

## 4.2.4 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

RBF did not observe hazardous substances or petroleum products on-site during the site visit.

## 4.2.5 CHEMICAL STORAGE TANKS (ASTS AND USTS)

During the site visit the subject site was inspected for fill pipes, vent pipes, areas of abnormal or heavy staining, manways, manholes, access covers, concrete pads not homogenous with surrounding surfaces, concrete build-up areas potentially indicating pump islands, abandoned pumping equipment, or fuel pumps. No evidence of manholes or hazardous material storage that appeared to be associated with chemical storage tanks was noted.

### 4.2.6 SPILLS

No visual or physical evidence of stained catch basins, drip pads, sumps, or stained soils was observed during the site visit.

## 4.2.7 SOLID WASTE DISPOSAL

No indication of on-site solid waste disposal practices (i.e., landfills) was apparent during the site visit.

## 4.2.8 UTILITIES

Water-related utilities were noted within the boundaries of the subject site during the April 29, 2014 site visit. No staining or leakage was noted with respect to on-site utilities.

#### 4.2.8.1 Polychlorinated Biphenyls (PCBs)

Overhead power lines trend along the western boundary of the subject site. One (1) polemounted transformer was noted in the vicinity of the proposed temporary bridge structure location. No evidence of di-electric fluid or staining was noted.

#### 4.2.8.2 Wells

No water wells were noted within the boundaries of the subject site during the site visit. No evidence of monitoring, oil, injection, or dry wells was observed on-site.

#### 4.2.8.3 Potable Water Supply

The vicinity appeared to be connected to a water line, which was noted via manhole covers.

#### 4.2.8.4 Sewage Disposal System

The project site and surrounding area appears to be served by the City's local sewer system. No evidence of other sewage disposal systems (including septic systems) was noted during the site visit.

#### 4.2.8.5 Heating/Cooling

No habitable structures are located within the subject site; therefore, RBF did not observe any heating or cooling systems during the April 29, 2014 site visit.

## 4.2.9 DRAINS AND SUMPS

Storm drains and associated outfall structure were noted in the area as well as along Grand Canal.

## 4.2.10 PITS, PONDS, LAGOONS

No evidence of pits, ponds, or lagoons was observed during the April 29, 2014, site visit.

## 4.3 OFF-SITE OBSERVATIONS

An adjoining property is considered any real property or properties that the border of which is contiguous or partially contiguous with that of the subject site, or that would be contiguous or partially contiguous with that of the subject site but for a street, road, or other public thoroughfare separating them. An adjacent property is any real property located within 0.25 miles of the subject site's border. Visual observations of the publicly accessible portions of adjoining properties were conducted on April 29, 2014 as part of this Phase I ISA and are described below.

## 4.3.1 DESCRIPTION OF CURRENT AND PAST USES OF THE SURROUNDING AREA

Surrounding current and past off-site uses appeared to consist of residential, commercial, transportation, and waterway uses. No evidence of past uses was noted during the site visit.

## 4.3.2 DESCRIPTION OF CURRENT USES AND STRUCTURES AT ADJOINING PROPERTIES

Current adjoining properties to the subject site consist of residential and transportation uses. Grand Canal trends to the north and south of the subject site.

During a preliminary observation of adjoining properties from public thoroughfares, no visible or physical evidence was observed to suggest that a surface release of petroleum-based material has recently occurred. No unusual or suspicious materials handling or storage practices were observed with respect to adjoining properties.

## 4.3.3 DESCRIPTION OF PAST USES AND STRUCTURES AT ADJOINING PROPERTIES

Based on available documentation obtained, off-site uses appear to have consisted of residential and commercial uses, similar to existing conditions. No evidence to suggest these past uses were observed during the April 29, 2014 site visit.

## 4.3.4 OBSERVATIONS OF OFF-SITE PROPERTIES

### 4.3.4.1 Utilities

Typical utilities (e.g., pole-mounted electrical transformer, sewer, and water facilities) were noted within adjacent roads during the April 29, 2014 site visit. No staining or leaking was observed with respect to off-site utilities during the April 29, 2014 site visit.

### 4.3.4.2 Chemical Storage Tanks

No chemical storage tanks or evidence of chemical storage tanks were noted at adjacent properties during the site visit.

#### 4.3.4.3 Hazardous Materials

During a preliminary observation of accessible areas on April 29, 2014, no visible or physical evidence was observed to suggest that a surface release of hazardous materials or petroleum based material has recently occurred. No unusual or suspicious materials handling or storage practices were observed with respect to adjacent properties.

# SECTION 5.0 INTERVIEWS

The ASTM E 1527-13 Standard Practice indicates that the objective of interviews is to obtain information indicating RECs in connection with the subject site. Interviews with past and present owners, operators, and occupants of the property consist of questions to be asked in the manner and of persons as described in the ASTM E 1527-13 Standard Practice. The content of questions to be asked shall attempt to obtain information about uses and conditions observed during the site reconnaissance as well as the documentation review. The content of questions to be asked of State and/or local government officials shall be decided in the discretion of the environmental professional(s) conducting the Phase I ISA, provided that the questions shall generally be directed towards identifying RECs in connection with the subject site.

# 5.1 **PROPERTY OWNER**

The subject site consists of transportation uses and associated ROW and water way uses, owned by the City of Newport Beach. Refer to <u>Section 2.0</u>, <u>User Provided Information</u>, for information obtained at the time of this Phase I ISA.

# 5.2 KEY SITE MANAGER/OPERATOR

A key site manager, identified by the property owner, is a person with good knowledge of the uses and physical characteristics of the property. Often the Key Site Manager is the property manager, the chief physical plant supervisor, or head maintenance person. If the user is the current property owner, the user has an obligation to identify a key site manager, even if it is the user himself or herself.

The Project Engineer, Mr. Bo Burick, was available for interview at the time of this Phase I ISA. Mr. Burick confirmed that on-site bridge structure at Park Avenue was constructed prior to 1934.

# 5.3 OCCUPANTS

No occupants were available for interview during the course of this Phase I ISA, as the subject site consists of transportation uses and associated ROW and waterway uses.

# 5.4 LOCAL GOVERNMENT OFFICIALS

## 5.4.1 City of Newport Beach Public Works Department

RBF contacted the City of Newport Beach Public Works Department to obtain information about the exact year of construction of the Park Avenue Bridge structure. Mr. Fong Tse, City Principal Civil Engineer, was not able to specify the exact time of the bridge construction. However, he identified, based on the City of Newport Beach (Plan No. 352), the improvement plans for the Park Avenue Bridge were dated on November 06, 1928 and that based on this information, the bridge should have been built prior to 1934.

# 5.5 OTHER PERSONS

## 5.5.1 Bayside Cleaners

RBF contacted the adjacent drycleaner facility (Bayside Cleaners) located at 1056 Bayside Drive to obtain information regarding their cleaning method and whether they had chemical releases in the past. Based on the interview conducted with staff, cleaning activities are performed at this property and this facility has operated at this property for more than 30 years. Staff stated that they do not have any knowledge pertaining to whether or not a past chemical release has or did occur in association with this drycleaner facility. Based on their website, their operations recently switched to a new Ecolab laundry system, in which the detergents used are now biodegradable.

# SECTION 6.0 EVALUATION

RBF has performed a Phase I ISA in general conformance with the scope of services and limitations of ASTM E 1527-13 Standard Practice for the Park Avenue Bridge Replacement Project, located in the City of Newport Beach, California, also known as the subject site within this Phase I ISA. Any exceptions to, or deletions from, this practice are described in the <u>Section</u> <u>1.5</u>, <u>Limitations</u>, <u>Deviations</u>, and <u>Exceptions</u>, of this Phase I ISA. This Phase I ISA has revealed the following in connection with the subject site.

# 6.1 FINDINGS AND OPINIONS

The following findings and opinions are based upon review of reasonable ascertainable referenced material available to RBF during the preparation of this Phase I ISA, which included a review of historical aerial photographs, historical topographic maps, regulatory databases, and other documentation, as well as interviews and site reconnaissance.

## 6.1.1 CURRENT ON-SITE USES

Currently, the subject site consists of one bridge structure, transportation uses and associated roadway ROW, and the Grand Canal. The following findings are noted in association with the existing on-site uses.

### 6.1.1.1 Bridge Structures

#### Asbestos-Containing Materials

Asbestos is a strong, incombustible, and corrosion resistant material, which was used in many commercial products since prior to the 1940s and up until the early 1970s. If inhaled, asbestos fibers can result in serious health problems. Asbestos containing-materials (ACMs) are building materials containing more than one percent (1%) asbestos (some state and regional regulators impose a one-tenth of one percent (0.1%) threshold). As ACMs are commonly known to be used in building materials for bridge structures, ACMs may be present in the on-site bridge structures (constructed prior to 1934). No visible evidence to suggest the release of ACMs into the environment was observed. Therefore, it is RBF's opinion that the on-site bridge structure have not resulted in a REC on the subject site as a result of ACMs.

Although RBF has determined that the on-site bridge structure has not resulted in a REC on the subject site as a result of ACMs, it is the opinion of RBF that should construction activities result in demolition or renovation activities, pursuant to SCAQMD regulations, an asbestos survey must be conducted by an Asbestos Hazard Emergency Response Act (AHERA) and California Occupational Health and Safety Administration (Cal/OSHA) certified building inspector to determine the levels of asbestos in the on-site structure. Compliance with District Rule 1403 (Asbestos Emissions from Demolition/Renovation Activities) would be required for any demolition or renovation work involving ACMs.

#### Lead-Based Paints

Until 1978, when the U.S Consumer Product Safety Commission (CPSC) phased out the sale and distribution of residential paint containing lead, many homes were treated with paint containing some amount of lead. It is estimated that over 80 percent of all housing built prior to 1978 contains some LBP. The mere presence of lead in paint may not constitute a material to be considered hazardous. In fact, if in good condition (no flaking or pealing), most intact LBP is not considered to be a hazardous material. In poor condition LBPs can create a potential health hazard for building occupants, especially children. As LBPs are commonly known to be used in building materials for bridge structures, LBPs may be present in the on-site bridge structure, which was constructed prior to 1934. No visible evidence to suggest the release of LBPs into the environment was observed. Therefore, it is RBF's opinion that the on-site bridge structure has not resulted in a REC on the subject site as a result of LBPs.

Although RBF has determined that the on-site bridge structure has not resulted in a REC on the subject site as a result of LBPs, it is the opinion of RBF that should construction activities result in the demolition or modification of the bridge structure, the generated waste should be disposed of at an appropriate, permitted disposal facility as determined by a lead specialist.

### 6.1.1.2 Traffic Striping Materials

LBPs were commonly used in traffic striping materials before the discontinued use of lead chromate pigment in traffic striping/marking materials and hot-melt thermoplastic stripe materials (discontinued in 1996 and 2004, respectively). RBF observed traffic striping within the boundaries of the subject site during the April 29, 2014 site visit. Thus, the potential for LBPs to be present on-site as a result of traffic striping is likely.

As the on-site striping materials are currently contained, and no visible evidence to suggest the release of LBPs into the environment was observed during the site visit, it is RBF's opinion that the likely presence of LBPs in traffic striping materials is not a REC at the time of this Phase I

ISA. Although RBF has determined that the on-site striping materials have not resulted in an REC on the subject site as a result of LBPs, it is the opinion of RBF that should construction activities result in the disturbance of traffic striping materials, the generated wastes should be disposed of at an appropriate, permitted disposal facility as determined by a lead specialist.

#### 6.1.1.3 Transformers

Pole-mounted transformers and pad-mounted utility boxes were noted on-site during the April 29, 2014 site visit. No evidence of dielectric fluid or staining was noted on-site. It is the opinion of RBF that the on-site transformers and other electrical utilities have not resulted in an REC on the subject site. A recommendation has been included in this ISA in order to ensure safety concerns during construction with regard to potential PCBs in on-site transformers and other utilities.

## 6.1.2 PAST ON-SITE USES

Based upon evaluation of the documented land use as demonstrated in the resources reviewed as part of this Phase I ISA, the subject site appears to have been vacant land in 1901 and 1902. Park Avenue, Balboa Avenue, Grand Canal, and a wooden bridge were constructed on-site by 1922. The on-site bridge structure was further improved in the late 1920's/early 1930's.

Based on the past on-site uses, the following findings with respect to the subject site are noted:

### 6.1.2.1 Aerially Deposited Lead

Until the mid-1980s, gasoline and other fuels contained lead, a toxic metal. As each car or truck traveled highways and roads, tiny particles of lead were released in the exhaust and settled on the soils next to the road. Most of the time, lead tends not to move very far or fast in the environment.

Caltrans has sampled sediment adjacent to traffic lanes in major metropolitan areas and determined that lead from leaded gasoline emissions is present. Elevated lead levels have been found to be highest at the surface (zero to six inches) and decreases with depth. Levels are highest immediately adjacent to the traveled way and decreases with distance from the road. Total lead levels on average are not greater that the Total Threshold Limit Concentration (TTLC) but will often exceed the Soluble Threshold Limit Concentration (STLC) found in Title 22, California Code of Regulations (CCR). The construction process of excavation, stockpiling, transporting, and disposing of material (i.e., soils), which exceeds the STLC for lead, makes the material a hazardous waste. If the material exceeds the Threshold Concentration Leaching

Potential (TCLP) test limits for lead, it is considered a Federal hazardous waste. However, tests conducted by Caltrans has concluded that materials excavated adjacent to freeways rarely exceed the TCLP threshold.

Based on the low number of vehicles traveling through the subject site (a residential collector road) and developed nature of the surrounding area (mostly paved surfaces and the Grand Canal), it is the opinion of RBF that the potential for lead contamination to exist within exposed soils on-site due to aerially deposited lead is unlikely. It is RBF's opinion that there is no REC on the subject site as a result of aerially deposited lead.

## 6.1.3 CURRENT ADJOINING PROPERTIES

Based on available information reviewed as part of this Phase I ISA, current adjoining properties consist of residential uses. Based on the EDR database report, no known corrective action, restoration, or remediation has been planned, is currently taking place, or has been completed on any known adjoining properties. Adjoining properties do not appear to have been under investigation for violation of any environmental laws, regulations, or standards, as identified in the databases reported by EDR. Thus, it is the opinion of RBF that no REC has resulted from current adjoining properties.

## 6.1.4 PAST ADJOINING USES

Based on available documentation obtained and the April 29, 2014 site visit, off-site uses appear to have consisted of residential uses, similar to existing conditions. Based on the evidence of past uses associated with adjoining properties reviewed as part of this ISA, it is the opinion of RBF that no REC has resulted at the subject site as a result of adjoining past uses.

## 6.1.5 CURRENT AND PAST ADJACENT USES

Based on available documentation obtained, off-site uses appear to have consisted of residential and commercial uses, similar to existing conditions. Based on the EDR database report, adjacent uses may have impacted the subject site, which are further described as follows.

### 6.1.5.1 Drycleaner Facilities

According to the U.S. Environmental Protection Agency (USEPA), dry cleaners are known to use a significant amount of chemicals, such as perchloroethylne (perc), which pose environmental concerns. At the end of the dry cleaning process, the cleaning fluid is separated from waste water by distillation. In the past, the waste water was often poured down floor drains. Perc can seep through the ground and contaminate surface water, groundwater, and potentially drinking water. Since a small amount of perc can contaminate a large amount of water, properties within a close proximately to dry cleaners or past dry cleaner sites have been found to potentially have subsurface contamination.

**1056 Bayside Drive (Bayside Cleaners):** This property is located approximately 1,000 feet (0.19-mile) and up-gradient to the northwest of the subject site and is listed in the SLIC, Orange Co. Industrial Site, and DRYCLEANERS databases. The site is reported SLIC released Tetrachloroethylene to soil. This case was reported closed on March 17, 1999. Based on Orange Co. Industrial Site database, closure certification was issued for a release of Perchloroethylene. According to EDR, this site has been used for dry cleaning and laundry services (except Coin Operated) since 1988.

RBF contacted the Bayside Cleaners to obtain information regarding their cleaning method and whether they had chemical releases in the past. Based on the interview conducted with staff, cleaning activities are performed at this property and this facility has operated at this property for more than 30 years. Staff stated that they do not have any knowledge pertaining to whether or not a past chemical release has or did occur in association with this drycleaner facility. Based on their website, their operations recently switched to a new Ecolab laundry system, in which the detergents used are now biodegradable.

Although this property is located approximately 1,000 feet up-gradient of the subject site, this property has achieved case closure of the reported release to soil. Further, although this site has operated for over 30 years and handled TCE at this time, the site is located approximately 1,000 feet from the subject site and is separated by a water body (Newport Bay). Thus, it is the opinion of RBF that even if this off-site property has contaminated groundwater, this contamination would not be at the subject site due to intervening water bodies. Thus, it is RBF's opinion that this off-site adjacent dry cleaner facility has not resulted in a REC at the subject site.

## 6.1.6 Acquisition Summary

There is no proposed ROW acquisition associated with the proposed project; therefore, there is no potential for an REC at the subject site as a result of new ROW acquisition.

## 6.1.7 DATA GAPS

A data gap is a lack of or inability to obtain information required by the ASTM E 1527-13 Standard Practice despite good faith efforts by the Environmental Professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including but not limited to site reconnaissance (for example, an inability to conduct the site visit) and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.). A data gap by itself is not inherently significant. For example, if a property's historical use in not identified back to 1940 because of data failure, but the earliest source shows that the property was undeveloped, this data gap by itself would not be significant. A data gap is only significant if other information and/or professional experience raises reasonable concerns involving the data gap. For example, if a building on the property is inaccessible during the site visit, and the Environmental Professional's experience indicates that such a building often involves activity that leads to a REC, the inability to inspect the building would be a significant data gap warranting comment.

RBF encountered data gaps as part of this Phase I ISA. However, as discussed in <u>Section 6.4</u>, <u>*Limiting Conditions/Deviations*</u>, below, it is the opinion of RBF that these identified data gaps do not present significant data gaps and no RECs have resulted in this regard.

# 6.2 CONCLUSIONS

RBF has performed a Phase I ISA in conformance with the scope and limitations of ASTM E 1527-13 Standard Practice for the Park Avenue Bridge Replacement Project, located in the City of Newport Beach, California, the subject site. Any exceptions to, or deletions from, this practice are described in <u>Section 1.5</u>, <u>Limitations, Deviations, and Exceptions</u>, of this Phase I ISA. This Phase I ISA has revealed no evidence of RECs in connection with the subject site.

## 6.3 **RECOMMENDATIONS**

The following recommendations are based on the findings, opinions, and conclusions noted during the course of this ISA. It is the opinion of RBF Consulting that the following recommendations be implemented:

- If unknown wastes or suspect materials are discovered during construction by the contractor, which he/she believes may involve hazardous waste/materials, the contractor shall:
  - Immediately stop work in the vicinity of the suspected contaminant, removing workers and the public from the area;
  - Notify the Project Engineer of the implementing agency;
  - Secure the areas as directed by the Project Engineer; and
  - Notify the implementing agency's Hazardous Waste/Materials Coordinator.

- <u>Asbestos Containing Materials (On-Site Bridge Structure)</u>: Although RBF has determined that the on-site structure has not resulted in a REC on the subject site as a result of potential ACMs, it is the opinion of RBF that when demolition/modification of the bridge structure occurs, asbestos testing should be conducted at the time of demolition/modification by a certified specialist retained by the City of Newport Beach and/or its consultant/contractor. If asbestos is present, the certified asbestos abatement specialist should monitor the disposal of the ACMs as they are uncovered.
- <u>Lead-Based Paint (On-Site Bridge Structure)</u>: Although RBF has determined that the onsite bridge structure has not resulted in a REC on the subject site as a result of LBPs, it is the opinion of RBF that when construction activities result in demolition or modification of the bridge structure, the generated waste should be disposed of at an appropriate, permitted disposal facility as determined by a lead specialist retained by the City of Newport Beach and/or its consultant/contractor. The City of Newport Beach and/or its consultant/contractor would be responsible for containing/transporting and properly disposing of the waste in accordance with the Federal, State, and local laws and regulations.
- Disturbance of Traffic Striping: Although RBF has determined that the on-site roadways containing traffic striping have not resulted in an REC at the subject site as a result of LBPs, it is the opinion of RBF that should construction activities result in the disturbance of traffic striping materials, the generated wastes should be disposed of at an appropriate, permitted disposal facility as determined by a lead specialist retained by the City of Newport Beach and/or its consultant/contractor. The City of Newport Beach and/or its consultant/contractor would be responsible for containing/transporting and properly disposing of the waste in accordance with the Federal, State, and local laws and regulations.
- <u>PCBs</u>: Although RBF has determined that the on-site transformers and electrical utilities have not resulted in an REC on the subject site, it is RBF's opinion that any transformer/electrical utilities to be relocated/removed during site construction/demolition should be conducted under the purview of the local purveyor, as coordinated by the City of Newport Beach and/or its consultant/contractor, to identify property-handling procedures regarding potential PCBs, if applicable.

## 6.4 LIMITING CONDITIONS/DEVIATIONS

RBF was unable to identify, within a five year interval, when the on-site bridge structure was constructed on-site. Although RBF did not achieve data within a five year interval of a change

in use at the subject site, no other records reviewed as part of this Phase I ISA has suggested that land uses other than those noted have been associated with the subject site.

An adjacent dry cleaner of concern has been reported in regulatory databases. However, due to the nature of the regulatory databases, it is the opinion of RBF that additional file reviews for this property would not provide additional information relative to determining the potential for a REC at the subject site as a result of this off-site dry cleaner facility. Thus, no file reviews were conducted for this off-site dry cleaner site.

Further, no additional scope items, or items outside of the scope of a Phase I ISA E 1527-13 Standard Practice, were conducted as part of this Phase I ISA.

# **APPENDICES**

# APPENDIX A: ASTM TERMINOLOGY

# TERMINOLOGY

The following definitions and descriptions of terms are from the ASTM E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

- **Abandoned property** property that can be presumed to be deserted, or an intent to relinquish possession or control can be inferred from the general disrepair or lack of activity thereon such that a reasonable person could believe that there was an intent on the part of the current owner to surrender rights to the property.
- Activity and use limitations legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls, are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property. See Note 1.

NOTE 1 – the term AUL is taken from Guide E2091 to include both legal (that is, institutional) and physical (that is, engineering) controls within its scope. Other agencies, organizations, and jurisdictions may define or utilize these terms differently (for example, EPA and California do not include physical controls within their definitions of "institutional controls." Department of Defense and International County/City Management Association use "Land Use Controls." The term 'land use restrictions" is used but not defined in the Brownfields Amendments).

- Actual knowledge the knowledge actually possessed by an individual who is a real person, rather than an entity. Actual knowledge is to be distinguished from constructive knowledge that is knowledge imputed to an individual or entity.
- Adjoining properties any real property or properties the border of which is contiguous or partially contiguous with that of the property, or that would be contiguous or partially contiguous with that of the property but for a street, road, or other public thoroughfare separating them.

- Aerial photographs photographs taken from an aerial platform with sufficient resolution to allow identification of development and activities of areas encompassing the property. Aerial photographs are often available from government agencies or private collections unique to a local area.
- All appropriate inquiry that inquiry constituting "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in CERCLA. 42 U.S.C. §9601(35)(B), that will qualify a party to a commercial real estate transaction for one of threshold criteria for satisfying the LLPs to CERCLA liability (42 U.S.C. §9601(35)(A) & (B), §9607(b)(3), §(9607(q); and §9607(r)), assuming compliance with other elements of the defense.
- **Approximate minimum search distance** the area for which records must be obtained and reviewed pursuant to Section 8 subject to the limitations provided in that section. This may include areas outside the property and shall be measured from the nearest property boundary. This term is used in lieu of radius to include irregularly shaped properties.
- **Bona fide prospective purchaser liability protection** (42 U.S.C. §9607(r) a person may qualify as a bona fide prospective purchaser if, among other requirements, such person made "all appropriate inquiries into the previous ownership and uses of the facility in accordance with generally accepted good commercial and customary standards and practices." Knowledge of contamination resulting from all appropriate inquiry would not generally preclude this liability protection. A person must make all appropriate inquiries on or before the date of purchase. The facility must have been purchased after January 11, 2002.
- Brownfields Amendments amendments to CERCLA pursuant to the Small Business Liability Relief and Brownfields Revitalization Act, Pub. L. No. 107-118 (2002), 42 U.S.C. §§9601 et. seq.
- **Building department records** those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property. Often building department records are located in the building department of a municipality or county.
- **Business environmental risk** a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business

environmental risk issues may involve addressing one or more non-scope considerations, some of which are identified in Section 13.

- **Commercial real estate** any real property except a dwelling or property with no more than four dwelling units exclusively for residential use (except that a dwelling or property with no more than four dwelling units exclusively for residential use is included in this term when it has a commercial function, as in the building of such dwellings for profit). This term includes but is not limited to undeveloped real property and real property used for industrial, retail, office, agricultural, other commercial, medical, or educational purposes: property used for residential purposes that has more than four residential dwelling units; and property with no more than four dwelling units for residential use when it has a commercial function, as in the building of such dwellings for profit.
- **Commercial and real estate transaction** a transfer of title to or possession of real property or receipt of a security interest in real property, except that it does not include transfer of title to or possession of real property or the receipt of a security interest in real property with respect to an individual dwelling or building containing fewer than five dwelling units, nor does it include the purchase of a lot or lots to construct a dwelling for occupancy by a purchaser, but a commercial real estate transaction does include real property purchased or leased by persons or entities in the business of building or developing dwelling units.
- **Comprehensive Environmental Response, Compensation, and Liability Information System** (CERCLIS) – the list of sites compiled by EPA that EPA has investigated or is currently investigating for potential hazardous substance contamination for possible inclusion on the National Priorities List.
- **Construction debris** concrete, brick, asphalt, and other such building materials discarded in the construction of a building or other improvement to property.
- **Contaminated public wells** public wells used for drinking water that have been designated by a government entity as contaminated by hazardous substances (for example, chlorinated solvents), or as having water unsafe to drink without treatment.
- **Contiguous property owner liability protection** (42 U.S.C. §9607(q) a person may qualify for the contiguous property owner liability protection if, among other requirements, such person owns real property that is contiguous to, and that is or may be contaminated by hazardous substances from other real property that is not owned by that person. Furthermore, such person conducted all appropriate inquiries at the time of

acquisition of the property and did not know or have reason to know that the property was or could be contaminated by a release or threatened release from the contiguous property. The all appropriate inquiries must not result in knowledge of contamination. If it does, then such person did "know" or "had reason to know" of contamination and would not be eligible for the contiguous property owner liability protection. See Appendix X1 for the other necessary requirements that are beyond the scope of this practice.

**Controlled recognized environmental condition** – a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). (See Note 2). A condition considered by the environmental professional to be controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report. (See Note 3).

Note 2 — For example, if a leaking underground storage tank has been cleaned up to a commercial use standard, but does not meet unrestricted residential cleanup criteria, this would be considered a controlled recognized environmental condition. The "control" is represented by the restriction that the property use remains commercial.

Note 3 - A condition identified as a controlled recognized environmental condition does not imply that the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be implemented.

- **CORRACTS list** a list maintained by EPA of hazardous waste treatment, storage, or disposal facilities and other RCRA-regulated facilities (due to past interim status or storage of hazardous waste beyond 90 days) that have been notified by the U.S. Environmental Protection Agency to undertake corrective action under RCRA. The CORRACTS list is a subset of the EPA database that manages RCRA data.
- **Data failure** a failure to achieve the historical research objectives in 8.3.1 through 8.3.2.2 even after reviewing the standard historical sources 8.3.4.1 through 8.3.4.8 that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap. See 8.3.2.3.

- **Data gap** a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.). See 12.7.
- **Demolition debris** concrete, brick, asphalt, and other such building materials discarded in the demolition of a building or other improvement to property.
- **De minimis condition** a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.
- **Drum** a container (typically, but not necessarily, holding 55 gal (208 L) of liquid) that may be used to store hazardous substances or petroleum products.
- **Dry wells** underground areas where soil has been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (intentional and non-intentional) and wastewater disposal (often illegal).
- **Due diligence** the process of inquiring into the environmental characteristics of a parcel of commercial real estate or other conditions, usually in connection with a commercial real estate transaction. The degree and kind of due diligence vary for different properties and differing purposes. See Appendix X1.
- **Dwelling –** structure or portion thereof used for residential habitation.
- **Engineering controls (EC)** physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or groundwater on the property. Engineering controls are a type of activity and use limitation (AUL).
- Environment environment shall have the same meaning as the definition of environment in CERCLA 42 U.S.C. § 9601 (8). For additional background information, see Legal Appendix (Appendix X1) to section XI. 1.1 "Releases and Threatened Release."
- **Environmental compliance audit** the investigative process to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations. This term should not be used to describe this practice, although an environmental compliance audit may include an environmental site assessment or, if prior audits are available, may be part of an environmental site assessment.
- Environmental lien a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products upon a property, including (but not limited to) liens imposed pursuant to CERCLA 42 U.S.C. §§9607(1) & 9607(r) and similar state or local laws.
- **Environmental professional** a person meeting the education, training, and experience requirements as set forth in 40 CFR §312.10(b). For the convenience of the reader, this section is reprinted in Appendix X2. The person may be an independent contractor or an employee of the user.
- Environmental site assessment (ESA) the process by which a person or entity seeks to determine if a particular parcel of real property (including improvements) is subject to recognized environmental conditions. At the option of the user, an environmental site assessment may include more inquiry than that constituting all appropriate inquiries or, if the user is not concerned about qualifying for the LLPs, less inquiry than that constituting all appropriate inquiries. An environmental site assessment is both different from and often less rigorous than an environmental compliance audit.
- **ERNS list** EPA's emergency response notification system list of reported CERCLA hazardous substance releases or spills in quantities greater than the reportable quantity, as maintained at the National Response center. Notification requirements for such releases or spills are codified in 40 CFR Parts 302 and 335.
- **Federal Register (FR)** publication of the United States government published daily (except for federal holidays and weekends) containing all proposed and final regulations and some other activities of the Federal Government. When regulations become final, they are included in the Code of Federal Regulations (CFR), as well as published in the Federal Register.
- Fill dirt dirt, soil, sand, or other earth, that is obtained off-site, that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation or

real property. It does not include material that is used in limited quantities for normal landscaping activities.

- **Fire insurance maps** maps produced for private fire insurance map companies that indicate uses of properties at specified dates and that encompass the property. These maps are often available at local libraries, historical societies, private resellers, or from the map companies who produced them.
- **Good faith** the absence of any intention to seek an unfair advantage or to defraud another party; an honest and sincere intention to fulfill one's obligations in the conduct or transaction concerned.
- Hazardous substance a substance defined as a hazardous substance pursuant to CERCLA 42 U.S.C. §9601(14), as interpreted by EPA regulations and the courts: "(A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title, (C) any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Resource Conservation and Recovery Act of 1976 (RCRA), as amended, (42 U.S.C. §6921) (but not including any waste the regulation of which under RCRA (42 U.S.C. §§6901 et seq.) has been suspended by Act of Congress, (D) any toxic pollutant listed under section 1317(a) of Title 33, (E) any hazardous air pollutant listed under section 112 of the Clean Air Act (42 U.S.C. §7412), and (F) any imminently hazardous chemical substance or mixture with respect to which the Administrator (of EPA) has taken action pursuant to section 2606 of Title 15. The term does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A) through (F) of this paragraph, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas)." (See Appendix X1.)
- Hazardous waste any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of RCRA, as amended, (42 U.S.C. §6921) (but not including any waste the regulation of which under RCRA (42 U.S.C. §§6901-6992(k) has been suspended by Act of Congress). RCRA is sometimes also identified as the Solid Waste Disposal Act. RCRA defines a hazardous waste, at 42 U.S.C. §6903, as: "a solid waste, or combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may (A) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or (B) pose a substantial present or potential hazard to human health or the

environment when improperly treated, stored, transported, or disposed of, or otherwise managed."

- **Hazardous waste/contaminated sites** sites on which a release has occurred, or is suspected to have occurred, of any hazardous substance, hazardous waste, or petroleum products, and that release or suspected release has been reported to a government entity.
- **Historical recognized environmental condition** a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I EsA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.
- IC/EC registries databases of institutional controls or engineering controls that may be maintained by a federal, state or local environmental agency for purposes of tracking sites that may contain residual contamination and AULs. The names for these may vary from program to program and state to state, and include terms such as Declaration of Environmental Use Restriction database (Arizona), list of "deed restrictions" (California), environmental real covenants list (Colorado), brownfields site list (Indiana, Missouri, Pennsylvania), and the Pennsylvania Activity and Use Limitation (PA AUL) Registry.
- **Innocent landowner defense** (42 U.S.C. §§9601(35) and 9607(b)(3)) a person may qualify as one of three types of innocent landowners: (i) a person who "did not know and had no reason to know" that contamination existed on the property at the time the purchaser acquired the property; (ii) a government entity which acquired the property by escheat, or through any other involuntary transfer or acquisition, or through the exercise of eminent domain authority by purchase or condemnation; and (iii) a person who "acquired the facility by inheritance or bequest." To qualify for the first type of innocent landowner defense, such person must have made all appropriate inquiries on or before the date of purchase. Furthermore, the all appropriate inquiry must not have resulted in

knowledge of the contamination. If it does, then such person did "know" or "had reason to know" of contamination and would not be eligible for the innocent landowner defense. See Appendix X1 for the other necessary requirements that are beyond the scope of this practice.

- **Institutional controls (IC)** a legal or administrative restriction (for example, "deed restrictions," restrictive covenants, easements, or zoning) on the use of, or access to, a site or facility to (1) reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. An institutional control is a type of Activity and Use Limitation (AUL).
- **Interviews** those portions of this practice that are contained in Section 10 and 11 thereof and address questions to be asked of past and present owners, operators, and occupants of the property and questions to be asked of local government officials.
- **Key site manager –** the person identified by the owner or operator of a property as having good knowledge of the uses and physical characteristics of the property. See 10.5.1.
- Landfill a place, location, tract of land, area, or premises used for the disposal of solid wastes as defined by state solid waste regulations. The term is synonymous with the term solid waste disposal site and is also known as a garbage dump, trash dump, or similar term.
- Landowner Liability Protections (LLPs) landowner liability protections under CERCLA; these protections include the bona fide prospective purchaser liability protection, contiguous property owner liability protection, and innocent landowner defense from CERCLA liability. See 42 U.S.C. §§9601(35)(A), 9601(40), 9607(b), 9607(q), 9607(r).
- **Local government agencies** those agencies of municipal or county government having jurisdiction over the property. Municipal and county government agencies include but are not limited to cities, parishes, townships, and similar entities.
- Local street directories directories published by private (or sometimes government) sources that show ownership, occupancy, and/or use of sites by reference to street addresses. Often local street directories are available at libraries, or historical societies, and/or local municipal offices. See 8.3.4.6 of this practice.

- **LUST sites** state lists of leaking underground storage tank sites. RCRA gives EPA and states, under cooperative agreements with EPA, authority to clean up releases from UST systems or require owners and operators to do so. (42 U.S.C. §6991b).
- **Major occupants** those tenants, subtenants, or other persons or entities each of which uses at least 40% of the leasable area of the property or any anchor tenant when the property is a shopping center.
- Material safety data sheet (MSDS) written or printed material concerning a hazardous substance which is prepared by chemical manufacturers, importers, and employers for hazardous chemicals pursuant to OSHA's Hazard Communication Standard, 29 C.F.R. §1910.1200.
- Material threat A physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage. The damage would represent a material threat if it is deemed serious enough that it may cause or contribute to tank integrity failure with release of contents to the environment.
- **Migrate/migration** for the purposes of this practice, "migrate" and "migration" refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurfaces, and vapor in the subsurface. See Note 4.

Note 4 – Vapor migration in the subsurface is described in Guide E2600; however, nothing in this practice should be construed to require application of the Guide E2600 standard to achieve compliance with all appropriate inquiries.

- **National Contingency Plan (NCP)** the National Oil and Hazardous Substances Pollution Contingency Plan, found at 40 C.F.R. Part 300, that is the EPA's blueprint on how hazardous substances are to be cleaned up pursuant to CERCLA.
- National Priorities List (NPL) list compiled by EPA pursuant to CERCLA 42 U.S.C. §9605(a)(8)(B) of properties with the highest priority for cleanup pursuant to EPA's Hazard Ranking System. See 40 C.F.R. Part 300.

- **Obvious** that which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer while visually or physically observing the property.
- **Occupants** those tenants, subtenants, or other persons or entities using the property or a portion of the property.
- **Operator** the person responsible for the overall operation of a facility.
- **Other historical sources –** any source or sources other than those designated in Sections 8.3.4.1 through 8.3.4.8 that are credible to a reasonable person and that identify past uses of the property. The term includes, but is not limited to: miscellaneous maps, newspaper archives, internet sites, community organizations, local libraries, historical societies, current owners or occupants of neighboring properties, and records in the files and/or personal knowledge of the property owner and/or occupants. See 8.3.4.9.
- **Owner** generally the fee owner of record of the property.
- **Petroleum exclusion** the exclusion from CERCLA liability provided in 42 U.S.C. §9601(14), as interpreted by the courts and EPA: "The term (hazardous substance) does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A) through (F) of this paragraph, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas)."
- **Petroleum products** those substances included within the meaning of the petroleum exclusion to CERCLA, 42 U.S.C. §9601(14), as interpreted by the courts and EPA, that is: petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under Subparagraphs (A) through (F) of 42 U.S.C. §9601(14), natural gas, natural gas liquids, liquefied natural gas, and synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas). (The word fraction refers to certain distillates of crude oil, including gasoline, kerosene, diesel oil, jet fuels, and fuel oil, pursuant to Standard Definitions of Petroleum Statistics.)

Phase I Environmental Site Assessment - the process described in this practice.

**Physical setting sources** – sources that provide information about the geologic, hydrogeologic, hydrologic, or topographic characteristics of a property. See 8.2.4.

- **Pits, ponds, or lagoons** man-made or natural depressions in a ground surface that are likely to hold liquids or sludge containing hazardous substances or petroleum products. The likelihood of such liquids or sludge being present is determined by evidence of factors associated with the pit, pond, or lagoon, including, but not limited to, discolored water, distressed vegetation, or the presence of an obvious wastewater discharge.
- Practically reviewable information that is practically reviewable means that the information is provided by the source in a manner and in a form that, upon examination, yields information relevant to the property without the need for extraordinary analysis of irrelevant data. The form of the information shall be such that the user can review the records for a limited geographic area. Records that cannot be feasibly retrieved by reference to the location of the property or a geographic area in which the property is located are not generally practically reviewable. Most databases of public records are practically reviewable if they can be obtained from the source agency by the county, city, zip code, or other geographic area of the facilities listed in the record system. Records that are sorted, filed, organized, or maintained by the source agency only chronologically are not generally practically reviewable. Listings in publicly available records which do not have adequate address information to be located geographically are not generally considered practically reviewable. For large databases with numerous records (such as RCRA hazardous waste generators and registered underground storage tanks), the records are not practically reviewable unless they can be obtained from the source agency in the smaller geographic area of zip codes. Even when information is provided by zip code for some large databases, it is common for an unmanageable number of sites to be identified within a given zip code. In these cases, it is not necessary to review the impact of all of the sites that are likely to be listed in any given zip code because that information would not be practically reviewable. In other words, when so much data is generated that it cannot be feasibly reviewed for its impact on the property, it is not practically reviewable.
- **Property** the real property that is the subject of the environmental site assessment described in this practice. Real property includes buildings and other fixtures and improvements located on the property and affixed to the land.
- **Property tax files –** the files kept for property tax purposes by the local jurisdiction where the property is located and may include records of past ownership, appraisals, maps, sketches, photos, or other information that is reasonably ascertainable and pertaining to the property. See 8.3.4.3.

- **Publicly available** information that is publicly available means that the source of the information allows access to the information by anyone upon request.
- **RCRA generators** those persons or entities that generate hazardous wastes, as defined and regulated by RCRA.
- **RCRA generators list** list kept by EPA of those persons or entities that generate hazardous wastes as defined and regulated by RCRA.
- **RCRA TSD facilities** those facilities on which treatment, storage, and/or disposal of hazardous wastes takes place, as defined and regulated by RCRA.
- **RCRA TSD facilities list** list kept by EPA of those facilities on which treatment, storage, and/or disposal of hazardous wastes takes place, as defined and regulated by RCRA.
- **Reasonably ascertainable** information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.
- **Recognized environmental conditions** the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.
- **Recorded land title records** records of historical fee ownership, which may include leases, land contracts, and AULs on or of the property recorded in the place where land title records are, by law or custom, recorded for the local jurisdiction in which the property is located. (Often such records are kept by a municipal or county recorder or clerk.) Such records may be obtained from title companies or directly from the local government agency. Information about the title to the property that is recorded in a U.S. district court or any place other than where land title records are, by law or custom, recorded for the local jurisdiction in which the property of the local jurisdiction in which the property is located, are not considered part of recorded land title records. See 8.3.4.4.
- **Records of emergency release notifications EPCRA** (42 U.S.C. §11004) requires operators of facilities to notify their local emergency planning committee (as defined in EPCRA) and state emergency response commission (as defined in EPCRA) and state emergency response commission (as defined in EPCRA) of any release beyond the facility's boundary of any reportable quantity of any extremely hazardous substance. Often the

local fire department is the local emergency planning committee. Records of such notifications are "Records of Emergency Release Notifications" (42 U.S.C. 11004).

- **Records review** that part that is contained in Section 8 of this practice which addresses records shall or may be reviewed.
- **Release** a release of any hazardous substance or petroleum product shall have the same meaning as the definition of "release" in CERCLA 42 U.S.C. § 9601(22)). For additional background information, see Legal Appendix (Appendix X1) to X1.1.1 "Releases and Threatened Release."
- **Report** the written report prepared by the environmental professional and constituting part of a "Phase I Environmental Site Assessment," as required by this practice.
- **Site reconnaissance** that part that is contained in Section 9 of this practice and addresses what should be done in connection with the site visit. The site reconnaissance includes, but is not limited to, the site visit done in connection with such a Phase I Environmental Site Assessment.
- **Site visit** the visit to the property during which observations are made constituting the site reconnaissance section of this practice.
- **Solid waste disposal site** a place, location, tract of land, area, or premises used for the disposal of solid wastes as defined by state solid waste regulations. The term is synonymous with the term landfill and is also known as a garbage dump, trash dump, or similar term.
- **Solvent** a chemical compound that is capable of dissolving another substance and may itself be a hazardous substance, used in a number of manufacturing/industrial processes including but not limited to the manufacture of paints and coatings for industrial and household purpose, equipment clean-up, and surface degreasing in metal fabricating industries.

Standard environmental record sources – those records specified in Section 8.2.1.

**Standard historical sources** – those sources of information about the history of uses of property specified in Section 8.3.4.

**Standard physical setting source** – a current (USGS 7.5 Minute Topographic Map (if any) showing the area on which the property is located.

**Standard practice –** the activities set forth in this practice.

- **Standard sources** sources of environmental, physical setting, or historical records specified in section 8 of this practice.
- **State registered USTs –** state lists of underground storage tanks required to be registered under Subtitle I, Section 9002 of RCRA.
- **Sump** a pit, cistern, cesspool, or similar receptacle where liquids drain, collect, or are stored.

**TSD facility** – treatment, storage, or disposal facility (see RCRA TSD facilities).

- **Underground injection** the emplacement or discharge of fluids into the subsurface by means of a well, improved sinkhole, sewage drain hole, subsurface fluid distribution system or other system, or groundwater point source.
- **Underground storage tank (UST)** any tank, including underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10% or more beneath the surface of the ground.
- User the party seeking to use Practice E1527 to complete and environmental site assessment of the property. A user may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. The user has specific obligations for completing a successful application of this practice as outlined in Section 6.
- **USGS 7.5 Minute Topographic Map** the map (if any) available from or produced by the United States Geological Survey entitled "USGS 7.5 Minute Topographic Map," and showing the property.
- Visually and/or physically observed during a site visit pursuant to this practice, this term means observations made by vision while walking through a property and the structures located on it and observations made by the sense of smell, particularly observations of noxious or foul odors. The term "walking through" is not meant to imply that disabled persons who cannot physically walk may not conduct a site visit;

they may do so by the means at their disposal for moving through the property and the structures located on it.

- **Wastewater** water that (1) is or has been used in an industrial or manufacturing process, (2) conveys or has convey sewage, or (3) is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. Wastewater does not include water originating on or passing through or adjacent to a site, such as stormwater flows, that has not been used in industrial or manufacturing processes, has not been combined with sewage, or is not directly related to manufacturing, processing, or raw materials storage areas at an industrial plant.
- **Zoning/land use records** those records of the local government in which the property is located indicating the uses permitted by the local government in particular zones within its jurisdiction. The records may consist of maps and/or written records. They are often located in the planning department of a municipality or county. See 8.3.4.8.

# SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

# STANDARD ENVIRONMENTAL RECORDS

### State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 03/12/2014 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

# EDR HIGH RISK HISTORICAL RECORDS

### EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there is 1 EDR US Hist Auto Stat site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MILLER G A	301 MARINE AVE	NW 0 - 1/8 (0.030 mi.)	2	10

Due to poor or inadequate address information, the following sites were not mapped. Count: 8 records.

\_

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### STANDARD ENVIRONMENTAL RECORDS

### Federal NPL site list

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/25/2013 Date Data Arrived at EDR: 11/11/2013 Date Made Active in Reports: 01/28/2014 Number of Days to Update: 78 Source: EPA Telephone: N/A Last EDR Contact: 04/08/2014 Next Scheduled EDR Contact: 07/21/2014 Data Release Frequency: Quarterly

EPA Region 10 Telephone 206-553-8665

### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991 Date Data Arrived at EDR: 02/02/1994 Date Made Active in Reports: 03/30/1994 Number of Days to Update: 56 Source: EPA Telephone: 202-564-4267 Last EDR Contact: 08/15/2011 Next Scheduled EDR Contact: 11/28/2011 Data Release Frequency: No Update Planned

### Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013 Date Data Arrived at EDR: 11/11/2013 Date Made Active in Reports: 01/28/2014 Number of Days to Update: 78 Source: EPA Telephone: N/A Last EDR Contact: 04/08/2014 Next Scheduled EDR Contact: 07/21/2014 Data Release Frequency: Quarterly

### Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013 Date Data Arrived at EDR: 11/11/2013 Date Made Active in Reports: 02/13/2014 Number of Days to Update: 94 Source: EPA Telephone: 703-412-9810 Last EDR Contact: 02/28/2014 Next Scheduled EDR Contact: 06/09/2014 Data Release Frequency: Quarterly

### FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/31/2013 Date Data Arrived at EDR: 07/08/2013 Date Made Active in Reports: 12/06/2013 Number of Days to Update: 151 Source: Environmental Protection Agency Telephone: 703-603-8704 Last EDR Contact: 01/10/2014 Next Scheduled EDR Contact: 04/21/2014 Data Release Frequency: Varies

### Federal CERCLIS NFRAP site List

### CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/25/2013 Date Data Arrived at EDR: 11/11/2013 Date Made Active in Reports: 02/13/2014 Number of Days to Update: 94 Source: EPA Telephone: 703-412-9810 Last EDR Contact: 02/28/2014 Next Scheduled EDR Contact: 06/09/2014 Data Release Frequency: Quarterly

### Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/11/2014 Date Data Arrived at EDR: 03/13/2014 Date Made Active in Reports: 04/09/2014 Number of Days to Update: 27 Source: EPA Telephone: 800-424-9346 Last EDR Contact: 03/13/2014 Next Scheduled EDR Contact: 07/14/2014 Data Release Frequency: Quarterly

### Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/11/2014 Date Data Arrived at EDR: 03/13/2014 Date Made Active in Reports: 04/09/2014 Number of Days to Update: 27 Source: Environmental Protection Agency Telephone: (415) 495-8895 Last EDR Contact: 03/13/2014 Next Scheduled EDR Contact: 07/14/2014 Data Release Frequency: Quarterly

### Federal RCRA generators list

### RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/11/2014 Date Data Arrived at EDR: 03/13/2014 Date Made Active in Reports: 04/09/2014 Number of Days to Update: 27 Source: Environmental Protection Agency Telephone: (415) 495-8895 Last EDR Contact: 03/13/2014 Next Scheduled EDR Contact: 07/14/2014 Data Release Frequency: Quarterly

### RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/11/2014 Date Data Arrived at EDR: 03/13/2014 Date Made Active in Reports: 04/09/2014 Number of Days to Update: 27 Source: Environmental Protection Agency Telephone: (415) 495-8895 Last EDR Contact: 03/13/2014 Next Scheduled EDR Contact: 07/14/2014 Data Release Frequency: Quarterly

### RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

### Federal institutional controls / engineering controls registries

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 12/17/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2014	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 03/10/2014
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/23/2014
	Data Release Frequency: Varies

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 12/17/2013 Date Data Arrived at EDR: 01/14/2014 Date Made Active in Reports: 01/28/2014 Number of Days to Update: 14 Source: Environmental Protection Agency Telephone: 703-603-0695 Last EDR Contact: 03/10/2014 Next Scheduled EDR Contact: 06/23/2014 Data Release Frequency: Varies

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 11/20/2013 Date Data Arrived at EDR: 11/21/2013 Date Made Active in Reports: 02/24/2014 Number of Days to Update: 95 Source: Department of the Navy Telephone: 843-820-7326 Last EDR Contact: 02/14/2014 Next Scheduled EDR Contact: 06/02/2014 Data Release Frequency: Varies

### Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/30/2013 Date Data Arrived at EDR: 10/01/2013 Date Made Active in Reports: 12/06/2013 Number of Days to Update: 66 Source: National Response Center, United States Coast Guard Telephone: 202-267-2180 Last EDR Contact: 04/04/2014 Next Scheduled EDR Contact: 07/14/2014 Data Release Frequency: Annually

### State- and tribal - equivalent NPL

RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 03/12/2014	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 03/13/2014	Telephone: 916-323-3400
Date Made Active in Reports: 04/10/2014	Last EDR Contact: 03/13/2014
Number of Days to Update: 28	Next Scheduled EDR Contact: 05/19/2014
	Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

### ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 03/12/2014 Date Data Arrived at EDR: 03/13/2014 Date Made Active in Reports: 04/10/2014 Number of Days to Update: 28 Source: Department of Toxic Substances Control Telephone: 916-323-3400 Last EDR Contact: 03/13/2014 Next Scheduled EDR Contact: 05/19/2014 Data Release Frequency: Quarterly

### State and tribal landfill and/or solid waste disposal site lists

### SWF/LF (SWIS): Solid Waste Information System

Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

	Data Release Frequency: Varies

### ADDITIONAL ENVIRONMENTAL RECORDS

#### Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 03/20/2014 Date Data Arrived at EDR: 03/20/2014 Date Made Active in Reports: 04/09/2014 Number of Days to Update: 20 Source: Environmental Protection Agency Telephone: 202-566-2777 Last EDR Contact: 03/20/2014 Next Scheduled EDR Contact: 07/07/2014 Data Release Frequency: Semi-Annually

Local Lists of Landfill / Solid Waste Disposal Sites

DEBRIS REGION 9: Torres Martinez Reservation Illegal Dump Site Locations

A listing of illegal dump sites location on the Torres Martinez Indian Reservation located in eastern Riverside County and northern Imperial County, California.

Date of Government Version: 01/12/2009
Date Data Arrived at EDR: 05/07/2009
Date Made Active in Reports: 09/21/2009

### Local Lists of Hazardous waste / Contaminated Sites

### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 12/04/2013	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 12/10/2013	Telephone: 202-307-1000
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 03/04/2014
Number of Days to Update: 65	Next Scheduled EDR Contact: 06/16/2014
	Data Release Frequency: Quarterly

### HIST CAL-SITES: Calsites Database

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

Date of Government Version: 08/08/2005 Date Data Arrived at EDR: 08/03/2006 Date Made Active in Reports: 08/24/2006 Number of Days to Update: 21

Source: Department of Toxic Substance Control Telephone: 916-323-3400 Last EDR Contact: 02/23/2009 Next Scheduled EDR Contact: 05/25/2009 Data Release Frequency: No Update Planned

### SCH: School Property Evaluation Program

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 03/12/2014 Date Data Arrived at EDR: 03/13/2014 Date Made Active in Reports: 04/10/2014 Number of Days to Update: 28

	Data Release Frequency: No Update Planned

#### Local Land Records

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 02/06/2013 Date Data Arrived at EDR: 04/25/2013 Date Made Active in Reports: 05/10/2013 Number of Days to Update: 15 Source: Environmental Protection Agency Telephone: 202-564-6023 Last EDR Contact: 01/27/2014 Next Scheduled EDR Contact: 05/12/2014 Data Release Frequency: Varies

LIENS: Environmental Liens Listing

A listing of property locations with environmental liens for California where DTSC is a lien holder.

Date of Government Version: 01/17/2014	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 01/21/2014	Telephone: 916-323-3400
Date Made Active in Reports: 02/11/2014	Last EDR Contact: 03/10/2014
Number of Days to Update: 21	Next Scheduled EDR Contact: 06/23/2014
	Data Release Frequency: Varies

### DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 03/10/2014 Date Data Arrived at EDR: 03/11/2014 Date Made Active in Reports: 04/10/2014 Number of Days to Update: 30 Source: DTSC and SWRCB Telephone: 916-323-3400 Last EDR Contact: 03/11/2014 Next Scheduled EDR Contact: 06/23/2014 Data Release Frequency: Semi-Annually

### **Records of Emergency Release Reports**

HMIRS: Hazardous Materials Information Reporting System Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 12/31/2013	Source: U.S. Department of Transportation
Date Data Arrived at EDR: 01/03/2014	Telephone: 202-366-4555

### LDS: Land Disposal Sites Listing

The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units.

Date of Government Version: 12/16/2013	Source: State Water Qualilty Control Board
Date Data Arrived at EDR: 12/17/2013	Telephone: 866-480-1028
Date Made Active in Reports: 01/04/2014	Last EDR Contact: 03/19/2014
Number of Days to Update: 18	Next Scheduled EDR Contact: 06/30/2014
	Data Release Frequency: Quarterly

### MCS: Military Cleanup Sites Listing

The State Water Resources Control Board and nine Regional Water Quality Control Boards partner with the Department of Defense (DoD) through the Defense and State Memorandum of Agreement (DSMOA) to oversee the investigation and remediation of water quality issues at military facilities.

Date of Government Version: 12/16/2013 Date Data Arrived at EDR: 12/17/2013 Date Made Active in Reports: 01/04/2014 Number of Days to Update: 18 Source: State Water Resources Control Board Telephone: 866-480-1028 Last EDR Contact: 03/19/2014 Next Scheduled EDR Contact: 06/30/2014 Data Release Frequency: Quarterly

### SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

Date of Government Version: 06/06/2012	Source: FirstSearch
Date Data Arrived at EDR: 01/03/2013	Telephone: N/A
Date Made Active in Reports: 02/22/2013	Last EDR Contact: 01/03/2013
Number of Days to Update: 50	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

### Other Ascertainable Records

### RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 03/11/2014 Date Data Arrived at EDR: 03/13/2014 Date Made Active in Reports: 04/09/2014 Number of Days to Update: 27 Source: Environmental Protection Agency Telephone: (415) 495-8895 Last EDR Contact: 03/13/2014 Next Scheduled EDR Contact: 07/14/2014 Data Release Frequency: Varies

DOT OPS: Incident and Accident Data

Department of Transporation, Office of Pipeline Safety Incident and Accident data.

Date of Government Version: 07/31/2012 Date Data Arrived at EDR: 08/07/2012 Date Made Active in Reports: 09/18/2012 Number of Days to Update: 42 Source: Department of Transporation, Office of Pipeline Safety Telephone: 202-366-4595 Last EDR Contact: 02/06/2014 Next Scheduled EDR Contact: 05/19/2014 Data Release Frequency: Varies

#### DOD: Department of Defense Sites

This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

Date of Government Version: 12/31/2005
Date Data Arrived at EDR: 11/10/2006
Date Made Active in Reports: 01/11/2007
Number of Days to Update: 62

### FUDS: Formerly Used Defense Sites

The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Date of Government Version: 12/31/2011 Date Data Arrived at EDR: 02/26/2013 Date Made Active in Reports: 03/13/2013 Number of Days to Update: 15 Source: U.S. Army Corps of Engineers Telephone: 202-528-4285 Last EDR Contact: 03/10/2014 Next Scheduled EDR Contact: 06/23/2014 Data Release Frequency: Varies

CONSENT: Superfund (CERCLA) Consent Decrees

Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: 12/31/2013	Source: Department of Justice, Consent Decree Library
Date Data Arrived at EDR: 01/24/2014	Telephone: Varies
Date Made Active in Reports: 02/24/2014	Last EDR Contact: 03/27/2014
Number of Days to Update: 31	Next Scheduled EDR Contact: 07/14/2014
	Data Release Frequency: Varies

ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 11/25/2013	Source: EPA
Date Data Arrived at EDR: 12/12/2013	Telephone: 703-416-0223
Date Made Active in Reports: 02/24/2014	Last EDR Contact: 03/11/2014
Number of Days to Update: 74	Next Scheduled EDR Contact: 06/23/2014
	Data Release Frequency: Annually

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act) A listing of FIFRA/TSCA Tracking System (FTTS) inspections and enforcements.

Date of Government Version: 04/09/2009	Source: EPA
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667
Date Made Active in Reports: 05/11/2009	Last EDR Contact: 02/24/2014
Number of Days to Update: 25	Next Scheduled EDR Contact: 06/09/2014
	Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006 Date Data Arrived at EDR: 03/01/2007 Date Made Active in Reports: 04/10/2007 Number of Days to Update: 40 Source: Environmental Protection Agency Telephone: 202-564-2501 Last EDR Contact: 12/17/2007 Next Scheduled EDR Contact: 03/17/2008 Data Release Frequency: No Update Planned

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

### SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009 Date Data Arrived at EDR: 12/10/2010 Date Made Active in Reports: 02/25/2011 Number of Days to Update: 77 Source: EPA Telephone: 202-564-4203 Last EDR Contact: 01/28/2014 Next Scheduled EDR Contact: 05/12/2014 Data Release Frequency: Annually

ICIS: Integrated Compliance Information System

The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

Date of Government Version: 07/20/2011 Date Data Arrived at EDR: 11/10/2011 Date Made Active in Reports: 01/10/2012 Number of Days to Update: 61 Source: Environmental Protection Agency Telephone: 202-564-5088 Last EDR Contact: 10/09/2014 Next Scheduled EDR Contact: 07/21/2014 Data Release Frequency: Quarterly

### PADS: PCB Activity Database System

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 06/01/2013	Source: EPA
Date Data Arrived at EDR: 07/17/2013	Telephone: 202-566-0500
Date Made Active in Reports: 11/01/2013	Last EDR Contact: 01/28/2014
Number of Days to Update: 107	Next Scheduled EDR Contact: 04/28/2014
	Data Release Frequency: Annually

### MLTS: Material Licensing Tracking System

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 07/22/2013	Source: Nuclear Regulatory Commission
Date Data Arrived at EDR: 08/02/2013	Telephone: 301-415-7169
Date Made Active in Reports: 11/01/2013	Last EDR Contact: 03/10/2014
Number of Days to Update: 91	Next Scheduled EDR Contact: 06/23/2014
	Data Release Frequency: Quarterly

### **RADINFO: Radiation Information Database**

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 01/09/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/10/2014	Telephone: 202-343-9775
Date Made Active in Reports: 03/12/2014	Last EDR Contact: 04/09/2014
Number of Days to Update: 61	Next Scheduled EDR Contact: 07/21/2014
	Data Release Frequency: Quarterly

### FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 11/18/2013 Date Data Arrived at EDR: 02/27/2014 Date Made Active in Reports: 03/12/2014 Number of Days to Update: 13 Source: EPA Telephone: (415) 947-8000 Last EDR Contact: 03/14/2014 Next Scheduled EDR Contact: 06/23/2014 Data Release Frequency: Quarterly

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995 Date Data Arrived at EDR: 07/03/1995 Date Made Active in Reports: 08/07/1995 Number of Days to Update: 35 Source: EPA Telephone: 202-564-4104 Last EDR Contact: 06/02/2008 Next Scheduled EDR Contact: 09/01/2008 Data Release Frequency: No Update Planned

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 11/01/2013 Date Data Arrived at EDR: 12/12/2013 Date Made Active in Reports: 02/13/2014 Number of Days to Update: 63 Source: Environmental Protection Agency Telephone: 202-564-8600 Last EDR Contact: 01/27/2014 Next Scheduled EDR Contact: 05/12/2014 Data Release Frequency: Varies

### BRS: Biennial Reporting System

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/2011 Date Data Arrived at EDR: 02/26/2013 Date Made Active in Reports: 04/19/2013 Number of Days to Update: 52 Source: EPA/NTIS Telephone: 800-424-9346 Last EDR Contact: 02/28/2014 Next Scheduled EDR Contact: 06/09/2014 Data Release Frequency: Biennially

### CA BOND EXP. PLAN: Bond Expenditure Plan

Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

Date of Government Version: 01/01/1989 Date Data Arrived at EDR: 07/27/1994 Date Made Active in Reports: 08/02/1994 Number of Days to Update: 6 Source: Department of Health Services Telephone: 916-255-2118 Last EDR Contact: 05/31/1994 Next Scheduled EDR Contact: N/A Data Release Frequency: No Update Planned

### UIC: UIC Listing

A listing of wells identified as underground injection wells, in the California Oil and Gas Wells database.

Date of Government Version: 09/25/2013Source: Deaprtment of ConservationDate Data Arrived at EDR: 12/17/2013Telephone: 916-445-2408Date Made Active in Reports: 01/07/2014Last EDR Contact: 03/18/2014Number of Days to Update: 21Next Scheduled EDR Contact: 06/30/2014Data Release Frequency: Varies
## NPDES: NPDES Permits Listing

A listing of NPDES permits, including stormwater.

Date of Government Version: 02/17/2014	Source: State Water Resources Control Board

#### ENF: Enforcement Action Listing

A listing of Water Board Enforcement Actions. Formal is everything except Oral/Verbal Communication, Notice of Violation, Expedited Payment Letter, and Staff Enforcement Letter.

Date of Government Version: 02/25/2014	Source: State Water Resoruces Control Board
Date Data Arrived at EDR: 02/27/2014	Telephone: 916-445-9379
Date Made Active in Reports: 03/18/2014	Last EDR Contact: 02/10/2014
Number of Days to Update: 19	Next Scheduled EDR Contact: 05/05/2014
	Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

Date of Government Version: 12/31/2012Source: CaDate Data Arrived at EDR: 07/16/2013Telephone:Date Made Active in Reports: 08/26/2013Last EDR CNumber of Days to Update: 41Next Sched

2020 COR ACTION: 2020 Corrective Action Program List

Date Made Active in Reports: 09/13/2013

Number of Days to Update: 72

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

#### US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

#### EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: N/A Date Data Arrived at EDR: N/A Date Made Active in Reports: N/A Number of Days to Update: N/A

### EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

### EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

### **OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013 Date Data Arrived at EDR: 08/19/2013 Date Made Active in Reports: 10/03/2013 Number of Days to Update: 45	Source: Department of Energy & Environmental Protection Telephone: 860-424-3375 Last EDR Contact: 02/21/2014 Next Scheduled EDR Contact: 06/02/2014 Data Release Frequency: Annually

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data Source: Rextag Strategies Corp. Telephone: (281) 769-2247 U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals: Source: American Hospital Association, Inc. Telephone: 312-280-5991 The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals. Medical Centers: Provider of Services Listing Source: Centers for Medicare & Medicaid Services Telephone: 410-786-3000 A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services. Nursing Homes Source: National Institutes of Health Telephone: 301-594-6248 Information on Medicare and Medicaid certified nursing homes in the United States. **Public Schools** Source: National Center for Education Statistics Telephone: 202-502-7300 The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states. **Private Schools** Source: National Center for Education Statistics Telephone: 202-502-7300 The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities Source: Department of Social Services Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

# **GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM**

### TARGET PROPERTY ADDRESS

PARK AVENUE BRIDGE REPLACEMENT PROJECT NA NEWPORT BEACH, CA 92662

## TARGET PROPERTY COORDINATES

Latitude (North):	33.6064 - 33° 36' 23.04''
Longitude (West):	117.889 - 117° 53' 20.40"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	417522.9
UTM Y (Meters):	3718676.8
Elevation:	0 ft. above sea level

## USGS TOPOGRAPHIC MAP

Target Property Map:	33117-E8 NEWPORT BEACH OE S, CA
Most Recent Revision:	1981
East Map:	33117-E7 LAGUNA BEACH, CA
Most Recent Revision:	1981

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- Groundwater flow direction, and
  Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## **GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## **TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

#### FEMA FLOOD ZONE

Ν

Target Property County ORANGE, CA	FEMA Flood <u>Electronic Data</u> YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property:	06059C - FEMA DFIRM Flood data
Additional Panels in search area:	Not Reported
NATIONAL WETLAND INVENTORY	NWI Electronic
NWI Quad at Target Property NEWPORT BEACH	<u>Data Coverage</u> YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data\*:

Search Radius:	•	1.25 miles
Status:		Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

	LOCATION	GENERAL DIRECTION
MAP ID	FROM TP	GROUNDWATER FLOW
1	0 - 1/8 Mile South	Varies
A2	1/4 - 1/2 Mile North	Not Reported
A3	1/4 - 1/2 Mile North	Not Reported
A4	1/4 - 1/2 Mile North	Not Reported
5	1/2 - 1 Mile East	Not Reported
B6	1/2 - 1 Mile NW	Varies
B7	1/2 - 1 Mile NW	Varies

For additional site information, refer to Physical Setting Source Map Findings.

## **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## **ROCK STRATIGRAPHIC UNIT**

## GEOLOGIC AGE IDENTIFICATION

Era:	5,	Stratified Sequence

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

## Soil Map ID: 1

Soil Component Name:	Water
Soil Surface Texture: Hydrologic Group:	Not reported
Soil Drainage Class: Hydric Status: Not hydric	
Corrosion Potential - Uncoated Steel:	Not Reported
Corrosion Potential - Uncoated Steel: Depth to Bedrock Min:	Not Reported > 0 inches
	-

## Soil Map ID: 2 Soil Component Name: BEACHES Soil Surface Texture: sand Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer. Soil Drainage Class: Poorly drained Hydric Status: All hydric Corrosion Potential - Uncoated Steel: High Depth to Bedrock Min: > 0 inches Depth to Watertable Min: > 92 inches

Soil Layer Information							
	Boundary		Classification		ication	Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	· · · · · ·	
1	0 inches	5 inches	sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.8 Min: 5.1
2	5 inches	59 inches	coarse sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.8 Min: 5.1

Soil Map ID: 3	
Soil Component Name:	CALLEGUAS
Soil Surface Texture:	clay loam
Hydrologic Group:	Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.
Soil Drainage Class:	Well drained
Hydric Status: Not hydric	
Corrosion Potential - Uncoated Steel:	High
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 0 inches

Soil Layer Information							
	Bou	Indary		Classification		Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	
1	0 inches	14 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 8.4 Min: 7.9
2	14 inches	18 inches	weathered bedrock	Not reported	Not reported	Max: 1.4 Min: 0	Max: Min:

## Soil Map ID: 4

Soil Component Name:	MYFORD
Soil Surface Texture:	sandy loam
Hydrologic Group:	Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.
Soil Drainage Class:	Moderately well drained
Hydric Status: Not hydric	
Corrosion Potential - Uncoated Steel:	High
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 0 inches

Soil Layer Information							
	Boundary		Boundary C	Classi	fication	Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Soil Reaction (pH)
1	0 inches	22 inches	sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 6 Min: 5.1
2	22 inches	27 inches	sandy clay	Not reported	Not reported	Max: 0.42 Min: 0.01	Max: 8.4 Min: 5.6

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

### **TOPOGRAPHIC INFORMATION**

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

#### HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### HYDROGEOLOGIC INFORMATION

AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

### **GEOLOGIC INFORMATION**

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

#### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS) Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
## PHYSICAL SETTING SOURCE RECORDS SEARCHED

#### LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS) This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database Source: Department of Water Resources Telephone: 916-651-9648

California Drinking Water Quality Database Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

#### **OTHER STATE DATABASE INFORMATION**

California Oil and Gas Well Locations Source: Department of Conservation Telephone: 916-323-1779 Oil and Gas well locations in the state.

#### RADON

State Database: CA Radon Source: Department of Health Services Telephone: 916-324-2208 Radon Database for California

Area Radon Information

Source: USGS Telephone: 703-356-4020 The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones Source: EPA Telephone: 703-356-4020 Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by RBF Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

# **EXECUTIVE SUMMARY**

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### **RESEARCH SUMMARY**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

# APPENDIX D: ISA CHECKLIST

#### **Project Information**

District <u>12</u> County <u>Orange</u> Route <u>Park Avenue</u> <u>Federal Project Number BRLO-5151(026)</u>

Description: Refer to Section 1.1.1, Project Description, of the ISA (page 1).

Is the project on the HW Study Minimal-Risk Projects List (HW1)? NO

Project Manager \_\_\_\_\_ phone # \_\_\_\_\_

Project Engineer <u>Fong Tse, City Principal Civil Engineer</u> phone # (949) 644-3321

### Project Screening

Attach the project location map to this checklist to show location of all known and/or potential HW sites identified.

- 1. Project Features: New R/W? <u>NO</u> Excavation? <u>YES</u> Railroad Involvement? <u>NO</u> Structure demolition/modification? YES (bridges) Subsurface utility relocation? YES
- 2. Project Setting <u>Refer to page 3-1, Section 3.1.1.1, Project Location, of the ISA.</u>

Rural or Urban Urban

Current land uses <u>Transportation and Waterway uses</u>

Adjacent land uses <u>Transportation</u>, Residential, Commercial, Waterway, and Vacant land uses.

3. Check federal, State, and local environmental and health regulatory agency records as necessary, to see if any known hazardous waste site is in or near the project area. If a known site is identified, show its location on the attached map and attach additional sheets, as needed, to provide pertinent information for the proposed project.

Refer to page 3-6, Exhibit 6, Overview Map, of the ISA, for the mapping of hazardous waste sites, and page 3-5, Section 3.2, Standard Environmental Record Sources, of the ISA for a discussion of hazardous waste sites on-site and in the vicinity.

4. Conduct Field Inspection. Date 04-29-14

Use the attached map to locate potential or known HW sites. <u>Refer to page 3-6, Exhibit 6,</u> <u>Overview Map</u>, of the ISA, for the mapping of hazardous waste sites; page 4-1, Section 4.0, <u>Site Reconnaissance</u>, for a discussion of the field inspection conducted on April 29, 2014; and Exhibits 7 and 8 (pages 4-2 and 4-3 of the ISA), for photographic documentation of the field inspection.

STORAGE STRUCTURES / PIPELINES:

Underground ta	Surface t	anks <u>I</u>	NONE OBSERVED	
Sumps	NONE OBSERVED	I	Ponds	NONE OBSERVED
Drums NONE OBSERVED		Basins	1	NONE OBSERVED
Transformers	In Vicinity	Landfill		NONE OBSERVED

Other NO

CONTAMINATION: (spills, leaks, illegal dumping, etc.)

Surface	e staining NONE OBSERVED	Oil sheen NONE OBS	SERVED
Odors	NONE OBSERVED	Vegetation damage	NONE OBSERVED
Other	NO		

HAZARDOUS MATERIALS: (asbestos, lead, etc.)

Buildings NOT	APPLICABLE	Spray-on firepr	oofing <u>I</u>	NOT APPLICABLE	
Pipe wrap	NOT APPLICAB	LE Friable	tile	NOT APPLICABLE	
Acoustical plas	ter <u>NOT AP</u>	PLICABLE	Serpen	tine NOT APPLICABLE	
Paint LEAD BASED PAINT ROADWAY STRIPING					

Other ACMs and LBPs associated with the on-site bridge structure.

5. Additional record search, as necessary, of subsequent land uses that could have resulted in a hazardous waste site. Use the attached map to show the location of potential hazardous waste sites.

Refer to Exhibit 6, Overview Map, of the Phase I ISA for the mapping of hazardous waste sites, and Section 3.2, *Standard Environmental Record Sources*, of the Phase I ISA for a discussion of hazardous waste sites in the surrounding area.

6. Other comments and/or observations: NONE.

### **ISA Determination**

Does the project have potential hazardous waste involvement? <u>NO</u> If there is known or potential hazardous waste involvement, is additional ISA work needed before task orders can be prepared for the Investigation? <u>NO</u> If "YES," explain; then give an estimate of additional time required: <u>NA</u>

A brief memo should be prepared to transmit the ISA conclusions to the Project Manager and Project Engineer.

ISA Conducted by	Juste Roque
